Inpatient Psychiatric Hospital- Clients with a wide variety of psychiatric disorders are admitted here only after the hospital decides admission is warranted. Clients generally are referred from crisis, and/or after a 302 or 201 petition. Admitted clients are treated by a multidisciplinary treatment team in a hospital setting. Staff will assess and treat most acute psychiatric illnesses, with the goal of helping the individual return to normal functioning in the community. Clients receive a discharge plan that aims to connect them with community treatment providers to aid in transitioning back to the community.

ECT Services- Highly controversial, called Electro-convulsive Therapy or commonly called Shock therapy. Today this is still in use. ECT is administered primarily in general hospital psychiatric units and in psychiatric hospitals. It is generally used in treating patients with severe depression, acute mania, and certain schizophrenic syndromes. ECT is also used with some suicidal patients, who cannot wait for antidepressant medication to take effect.

Partial Hospitalization Program – Mental Health- Clients will be recommended to this treatment level by psychological or psychiatric evaluation. Partial hospitalization is a comprehensive, short-term, intensive, clinical treatment program. With regard to level of treatment, partial hospitalization is a step below inpatient hospitalization but more concentrated than traditional outpatient care. Clients are generally referred to partial programs when they are experiencing acute psychiatric symptoms that are difficult to manage but that do not require 24-hour care.

Individuals in partial hospitalization programs attend structured programming throughout the day, three to five days a week and return home in the evenings. To ensure client safety, many of the inpatient hospitalization rules apply (i.e. no phones, no shoelaces) to partial hospitalization programs. These programs can serve Adults and juveniles, albeit separately.

YOUTH SERVICES

MST- Used heavily in juvenile court. Multi-Systems Multi-Systemic Therapy. This is an intensive family- and community-based treatment program that focuses on addressing all environmental systems that impact chronic and violent juvenile offenders -- their homes and families, schools and teachers, neighborhoods and friends. MST recognizes that each system plays a critical role in a youth's world and each system requires attention when effective change is needed to improve the quality of life for youth and their families. MST works with the toughest offenders ages 12 through 17 who have a very long history of arrests.

serious emotional disturbance, a serious social problem, and/or behavioral problems. BHRS is the name for services formerly known as Wraparound. BHRS are provided to the client in the school, home, and/or community setting. Services include Therapeutic Staff Support, Dynamic Group Intervention, Mobile Therapy, Behavioral Specialist Consultant Services, and Functional Behavioral Assessments. The focus of our program is to provide treatment in the least restrictive environment, while maintaining the child within his or her natural setting. The service “wraps” around the child, providing individualized treatment in a familiar environment.

FFSBS-FFSBS will engage children, their families, and other community members who care about the child to produce an individualized family focused, child centered service plan that addresses the behavioral health needs of the child/adolescent and assists the family with supporting the child/adolescent, or other family member, with a diagnosed behavioral health disorder. The service will also work cooperatively with involved child welfare or juvenile justice entities to identify any unmet family support needs in order to help the child succeed at home and in school, improve the overall stability of the home environment and prevent out-of-home placement.

Occupational Therapy(kids)- OT can help kids with various needs improve their cognitive, physical, sensory, and motor skills and enhance their self-esteem and sense of accomplishment. Some people may think that occupational therapy is only for adults; kids, after all, do not have occupations. But a child's main job is playing and learning, and occupational therapists can evaluate kids' skills for playing, school performance, and daily activities and compare them with what is developmentally appropriate for that age group.

Occupational Therapy Programs (Collage), 100 Media Line Rd. Newtown Square, PA 19073, 610-356-7355 (Child/Adolescent Only)

Music Therapy- Music Therapy is the clinical and evidence-based use of music interventions to accomplish individualized goals within a therapeutic relationship. It is an established health profession in which music is used within a therapeutic relationship to address physical, emotional, cognitive, and social needs of individuals. After assessing the strengths and needs of each client, the qualified music therapist provides the indicated treatment including creating, singing, moving to, and/or listening to music. Through musical involvement in the therapeutic context, clients' abilities are strengthened and transferred to other areas of their lives. Music therapy also provides avenues for communication that can be helpful to those who find it difficult to express themselves in words. Research in music therapy supports its effectiveness in many areas such as: overall physical rehabilitation and facilitating movement, increasing people's motivation to become engaged in their treatment, providing emotional support for clients and their families, and providing an outlet for expression of feelings.

maintained in the community with natural resources but do not require the structure of an RTF program. CRR Host Homes are intensive out of home treatment services. The client resides with a family who is trained to work with children experiencing behavioral and emotional difficulty. This program allows the child to be active with children and activities in the community. The service provides individual, group and family therapy, as well as medication monitoring. The client attends school within the community of the host home.

Certified Peer Specialist- Certified Peer Specialists provide a personal level of engagement with individuals who need peer support in the community. They are fully mobile and able to meet with people in their community – at their home, in a coffee shop, at a shelter. People diagnosed with serious mental illness no longer have to attend a day program in order to receive peer support services. Certified Peer Specialists are trained in the fundamental principles of recovery and in specialized therapeutic interactions, but their broadest knowledge comes from being people in recovery themselves. They are uniquely prepared to walk with an individual on the journey to wellness and a fulfilling life. Freestanding peer support services may include help with:

Psychiatric Rehabilitation Services- For community-based clients. Those suffering from severe and persistent mental illness require rehabilitation. The goal of psychiatric rehabilitation is to help disabled individuals to develop the emotional, social and intellectual skills needed to live, learn and work in the community with the least amount of professional support. The overall philosophy of psychiatric rehabilitation comprises two intervention strategies. The first strategy is individual-centered and aims at developing the patient's skills in interacting with a stressful environment. The second strategy is ecological and directed towards developing environmental resources to reduce potential stressors. Most disabled persons need a combination of both approaches. The refinement of psychiatric rehabilitation has achieved a point where it should be made readily available for every disabled person.

Adult MH IOP Program- Intensive outpatient programs (IOP) are non-residential programs that maintain hours of service for at least 3 hours per day, 2 or more days per week. Typically, programs run for 4-6 hours/day, 4-5 days/week. They may be used as an initial point of entry into care, as a step up from routine outpatient services, or as a step down from acute inpatient, residential care or a partial hospital program. An IOP can be used to treat mental health conditions, sexual acting out, or can specialize in the treatment of co-occurring mental health and substance use disorders (dual-diagnosis). Clients MUST be recommended for this level of care by assessment.

Halfway House- Half way Houses are designed to assist men and women in preventing relapse, developing the skills and self-motivation they need to successfully adjust to a drug-free lifestyle and to maintain it after they leave the facility. The clients receive daily instruction and practice skills in the development of positive life goals and responsibilities. Generally- clients come to Halfway Houses directly from Rehabs, and those facilities make such referrals.

Methadone Maintenance- Facilities that manage and dispense a synthetic alternative drug for those addicted to opioids- typically heroin. Most people cannot just walk away from opioid addiction. They need help to change their thinking, behavior, and environment. Unfortunately, “quitting cold turkey” has a poor success rate – fewer than 25 percent of patients are able to remain abstinent for a full year.

Partial Hospital for Drug/Alcohol- This is the more intensive of the two outpatient programs for drugs and alcohol, and is the closest to inpatient treatment. Clients MUST be assessed to qualify. This is a 5 or 7 day treatment regimen and runs 4-8 hours/day. Typical length of stay in this program ranges from 2-4 weeks depending on progress. All patients enrolled attend 4-6 group therapy sessions daily and can receive individual and family sessions as needed. Patients will be under the care of a psychiatrist for medication monitoring throughout the process.

Drug/Alcohol IOP- Intensive Outpatient Programs are much less restrictive than PHP and offers 3-5 day a week programming , typically 3-4 hours daily in the morning or evening. Client attend a minimum of 2 group therapy sessions a day. Individual and family therapy can be used throughout the process if deemed beneficial by the therapist. As IOP is therapy based only, patients needing medication monitoring and administration will be assisted by staff to arrange for private psychiatric treatment. IOP offers much more freedom and
