MONTCO 2040: A SHARED VISION
The Comprehensive Plan for Montgomery County

Prepared by Montgomery County Planning Commission
Montgomery County, Pennsylvania
MONTCO 2040 AWARDS

National Award
Award of Merit in the Comprehensive Plan – Large Jurisdiction Category from American Planning Association (APA), County Planning Division (CPD), and the National Association of County Planners (NACP)

State Award
2015 Daniel Burnham Award for Comprehensive Plan from the Pennsylvania Chapter of the American Planning Association (APA-PA)

Local Awards
2015 Planning Award from Greater Valley Forge Transportation Management Association (GVF)
2015 President’s Award from The Partnership TMA (PTMA)

**USING THIS PLAN**

*Montco 2040: A Shared Vision* is designed to be an implementable and measurable plan. Unlike many plans, it is structured around the implementation of themes and goals rather than specific topics. To help readers use the plan, the topic areas from Montgomery County Today, which is the existing conditions and trend report for this comprehensive plan, are listed below with the goals that are most related to the topic.

### The People of Montgomery County
- Goal – Collaboration among Stakeholders ........................................... 14
- Goal – Diverse Housing Choices ............................................................. 54
- Goal – Flexibility with Market Conditions ............................................. 70

### The Health of County Residents
- Goal – Opportunities for Healthy Lifestyles ........................................... 52

### The County’s Built Environment
- Goal – Strong Downtowns and Destinations ......................................... 24
- Goal – Diverse Housing Choices ............................................................. 54
- Goal – Enhanced Community Character ............................................... 56
- Goal – Focused Development ................................................................. 66
- Vision – Land Use Vision ...................................................................... 76

### The County’s Natural Environment
- Goal – Connected Trails and Greenways ............................................... 20
- Goal – Conserved Natural Resources ..................................................... 42

### The County’s Open Space and Recreation Network
- Goal – Connected Trails and Greenways ............................................... 20
- Goal – Conserved Natural Resources ..................................................... 42
- Goal – Opportunities for Healthy Lifestyles .......................................... 52
- Vision – Land Use Vision ...................................................................... 76

### The County’s Transportation Network
- Goal – Improved Transportation Choices ............................................. 16
- Goal – Connected Trails and Greenways ............................................... 20
- Goal – Modernized Infrastructure Network ......................................... 30
- Goal – Improved Transportation Access ............................................. 62
- Vision – Transportation Vision ............................................................... 92

### The Homes of Montgomery County
- Goal – Diverse Housing Choices ............................................................. 54
- Goal – Enhanced Community Character ............................................... 56
- Vision – Land Use Vision ...................................................................... 76

### The County Economy
- Goal – Improved Transportation Access ............................................. 62
- Goal – Focused Development ................................................................. 66
- Goal – Attraction and Retention of Businesses ....................................... 68
- Goal – Flexibility with Market Conditions .......................................... 70
- Goal – Marketing of Assets ................................................................... 72

### The County’s Infrastructure Backbone
- Goal – Modernized Infrastructure Network ......................................... 30
- Goal – Improved Stormwater Management ........................................... 38
- Goal – Enhanced Community Character ............................................. 56

### Cultural and Educational Resources
- Goal – Strong Downtowns and Destinations ......................................... 24
- Goal – Enhanced Community Character ............................................... 56
- Goal – Marketing of Assets ................................................................... 72
WHAT IS A COMPREHENSIVE PLAN?

A comprehensive plan is a long-range plan required by state law for guiding the growth and physical development of a place. The Philadelphia region as a whole has a comprehensive plan, as do most of the 62 municipalities in Montgomery County. So, with all these comprehensive plans, what is the role of a county plan?

The county plan provides an overall land use and growth management framework for local municipal plans and provides guidance on issues that transcend local boundaries, such as highways, public transportation, flooding, trails, growth trends, redevelopment trends, shopping needs, impact of large developments, overall housing needs, natural systems, economic growth, etc. The county plan is an advisory document used to guide county and local municipal policies.

WHAT IS IN MONTCO 2040: A SHARED VISION?

Montco 2040: A Shared Vision is Montgomery County’s new comprehensive plan, providing an overview of the county’s vision and objectives. It reflects the input of thousands of citizens, county officials, and a steering committee made up of many diverse stakeholders. The plan was prepared by the county planning commission and adopted by the County Commissioners.

This plan provides goals and implementation steps for managing the county’s built environment. It is structured around three themes:

- Connected Communities
- Sustainable Places
- Vibrant Economy

The plan’s concluding chapter provides a vision for the future of the county and includes an overall transportation vision, a land use vision, and a concluding vision.
## Themes and Goals

### How Was the Plan Created?

*Montco 2040: A Shared Vision* was created through an extensive research and public outreach process.

<table>
<thead>
<tr>
<th>Year</th>
<th>Event Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2005</td>
<td><strong>County’s 2005 plan, Shaping Our Future, provides foundation for a new plan</strong></td>
</tr>
<tr>
<td></td>
<td>Conditions in the county have changed since the early 2000s, partially due to the Great Recession. In addition, state law provides that county comprehensive plans shall be reviewed every 10 years, and the 2005 comprehensive plan is the last one adopted by the County Commissioners.</td>
</tr>
<tr>
<td>2012-2013</td>
<td><strong>Current conditions analyzed in Montgomery County Today</strong></td>
</tr>
<tr>
<td></td>
<td>County planning commission staff examined existing conditions, recent trends, and future forecasts for the county. These are summarized in Montgomery County Today, which includes regional position, people, health, built environment, natural environment, open space, transportation, housing, the economy, infrastructure, cultural resources, and governmental structure.</td>
</tr>
<tr>
<td>Fall, 2013</td>
<td><strong>Steering Committee created</strong></td>
</tr>
<tr>
<td></td>
<td>The county commissioners and MCPC Board appointed a Steering Committee to oversee Montco 2040: A Shared Vision. This 28-member diverse committee includes representatives of municipal government, businesses, transportation providers, conservationists, developers, economic development, health advocates, education, housing, seniors, and farmers.</td>
</tr>
<tr>
<td>Fall, 2013- Winter, 2014</td>
<td><strong>Public survey made available</strong></td>
</tr>
<tr>
<td></td>
<td>Over 2,500 surveys were completed. The top issues respondents wanted the county to address were retaining businesses, repairing local roads/bridges, addressing aging water/sewer infrastructure, and reducing traffic congestion.</td>
</tr>
<tr>
<td></td>
<td><strong>Public workshops held</strong></td>
</tr>
<tr>
<td></td>
<td>Four public workshops focused on issues identified in Montgomery County Today were held around the county. More than 150 people attended these workshops. In a money allocation exercise, participants gave the most money to transportation and economic development.</td>
</tr>
<tr>
<td></td>
<td><strong>Other public input encouraged</strong></td>
</tr>
<tr>
<td></td>
<td>Public input was also gathered online, with additional meetings held with community groups, and through social media. What issues are most important to citizens? Transportation, jobs and the economy, infrastructure, revitalization, and taxes.</td>
</tr>
<tr>
<td>Winter, 2014</td>
<td><strong>Themes and goals for the plan drafted</strong></td>
</tr>
<tr>
<td></td>
<td>Using public input as a guide, the Steering Committee drafted themes and goals, which were then shared with the public, local municipalities, school districts, and other stakeholders for their comment and input.</td>
</tr>
<tr>
<td>Spring-Fall, 2014</td>
<td><strong>Implementation steps and recommendations prepared, followed by public meetings</strong></td>
</tr>
<tr>
<td></td>
<td>Following adjustments of the draft goals to reflect public comment, the Steering Committee prepared implementation steps that identify what will be done, who will do it, and how it will be measured. This draft plan was shared with the public for their input and discussed at four public workshops and numerous other meetings around the county.</td>
</tr>
<tr>
<td>Winter, 2015</td>
<td><strong>Final plan, Montco 2040: A Shared Vision, is adopted on January 15, 2015 by the County Commissioners</strong></td>
</tr>
<tr>
<td></td>
<td>Planning commission staff solicited input on draft changes from colleagues, municipal staff, and surrounding jurisdictions.</td>
</tr>
<tr>
<td>Summer, 2021</td>
<td><strong>Revised plan, reflecting map and policy changes, is adopted on July 15, 2021 by the County Commissioners</strong></td>
</tr>
</tbody>
</table>
Montco 2040: A Shared Vision is designed around three interrelated themes.

**Connected Communities**
People want to be connected and part of a broader community. A key role for the county is to help these connections occur beyond local municipal boundaries.

**Connected Communities involve:**
- Collaboration among stakeholders
- Improved transportation choices
- Trails and greenways connecting multiple places
- Vibrant downtowns and destinations accessible by everyone

**Sustainable Places**
The county is full of wonderful neighborhoods and communities. These places need to be sustained and enhanced in a long-lasting and effective way.

**Sustainable Places involve:**
- Modernized infrastructure network
- Improved stormwater management
- Protected natural resources
- Opportunities for healthy lifestyles
- Diverse housing choices
- Enhanced community character

**Vibrant Economy**
A strong economy is critical for all places. With a vibrant economy, residents can earn and spend more, governments can make needed infrastructure improvements, and businesses can grow.

**A Vibrant Economy involves:**
- Improved transportation access
- Focused development
- Attraction and retention of businesses
- Flexibly adapting to changing market conditions
- Marketing of assets

Partnerships - Diversity - Growth - Quality Public Services - Community - Changing Demographics
THEMES AND GOALS

CONNECTED COMMUNITIES

GOAL Encourage collaboration and partnerships among governments, businesses, institutions, schools, higher education, and other stakeholders

Why this goal is important:
- With 62 municipalities and 22 active school districts, local cooperation is critical.
- Issues are complex and funding often limited, which makes public private partnerships essential.
- Montgomery County is inextricably linked to Philadelphia and its other neighboring counties.

How this goal will be implemented:
- Through participation in multi-jurisdictional and regional organizations.
- By expanding multi-municipal planning and other cooperation efforts.
- With preparation and promotion of model ordinances, advisory guidelines, and stormwater standards for more consistent regulations.

GOAL Improve transportation quality and expand options for county residents and workers

Why this goal is important:
- Many residents and workers, particularly younger ones, want options other than cars to get to work.
- Only 8.1% of county residents walk, bicycle, or take public transit to work.
- 83% of county residents are in less walkable areas.

How this goal will be implemented:
- By working with others to improve road connectivity, expand Intelligent Transportation Systems, and eliminate road bottlenecks.
- By working with transit providers to extend service, increase frequency, improve access, and encourage transit-oriented development.
- With advocacy for more sidewalks and pedestrian-oriented design of developments.
- Through cooperation with others to add bike-friendly improvements to roads.
- Through collaboration to improve travel demand management.
**GOAL** Expand and connect county trails, local trails, greenways, natural areas, and parks

**Why this goal is important:**
- Trails not only meet recreation and transportation needs; they also improve personal health and the local economy.
- Two-thirds of the county’s trail network still needs to be completed.
- Greenways protect and link sensitive natural areas and provide corridors for wildlife.

**How this goal will be implemented:**
- By expanding the county trail system.
- By working to connect local trails to the county system.
- With increased county parkland in greenway corridors and advocacy with others to preserve greenways.

**GOAL** Support strong downtowns and community destinations, including mixed use areas, arts and culture focal points, libraries, and other gathering places

**Why this goal is important:**
- In interviews and meetings, people consistently say they want more physical, civic, and social connections.
- Vital downtowns and mixed use areas improve nearby property values.
- The county has many unknown arts and culture “hidden gems.”

**How this goal will be implemented:**
- Through collaboration to revitalize downtowns.
- By working with arts organizations and the tourism and convention board to raise the profile of arts and culture.
- By strengthening the county library and collaborating with other libraries.
THEMES AND GOALS

SUSTAINABLE PLACES

GOAL Support a modern, resilient, green, and energy-efficient infrastructure network

Why this goal is important:
- Safe and clean sewer, water, and stormwater systems and well-maintained roads and bridges protect the health and safety of county residents and provide a foundation for economic development.
- Many sewer and water systems are aging and need to be upgraded.
- Communication, energy, and other infrastructure is rapidly changing and a critical concern for modern business.

How this goal will be implemented:
- By improving county roads and bridges.
- With right-sized roads, traffic calming, green streets, and sidewalks.
- Through advocacy for environmentally-friendly upgrades to municipal sewage systems.
- By working with others to match water supply areas, sewer service areas, and growth areas.
- With water source protection and water conservation.
- By encouraging recycling.
- By adapting to new energy and communication needs.

GOAL Improve stormwater management and reduce the impact of flooding

Why this goal is important:
- Over the past 30 years, flooding, which is the number one natural hazard in the county, has resulted in several fatalities and more than $120 million in property damage.
- There are 2,600 structures, as well as much important infrastructure, located within floodplains.
- Impervious coverage and resulting stormwater runoff continues to increase.

How this goal will be implemented:
- By implementing required stormwater improvements.
- By completing watershed stormwater management plans.
- Through advocacy for best stormwater management practices.
- By working with others to limit development in the floodplain.
GOAL Conserve natural resources, environmentally-sensitive areas, and farmland

Why this goal is important:
- Wetlands, woodlands, trees, and natural areas reduce flooding, protect water quality, improve air quality, and increase property values.
- Climate change and more variable weather will impact the county in many ways that can be ameliorated by conservation.
- Homes near open space have higher values, which is estimated at $16.3 billion in additional value for Southeastern Pennsylvania’s housing stock.

How this goal will be implemented:
- With permanent protection of natural resources, open space, and rural areas.
- By adding environmentally-sensitive land to parkland while improving county parks.
- By preserving farmland.

GOAL Provide more opportunities for residents to exercise and have healthy lifestyles

Why this goal is important:
- Health is impacted by the built environment and the ability to walk and exercise conveniently.
- Diabetes, heart disease, obesity, and other chronic health concerns have increased over the past decade.
- Many county residents are disconnected from fresh, local food grown or raised in the county.

How this goal will be implemented:
- By expanding opportunities to exercise in county parks.
- Through advocacy to make communities more walkable while coordinating recreation planning efforts.
- By working with others to increase the supply of fresh local food.
THEMES AND GOALS

GOAL Support housing choices and opportunities to meet the needs of all people

Why this goal is important:
- There are increasing numbers of smaller households, those living alone, and others who prefer to live in an apartment or townhouse.
- The senior population is expected to grow 58% between 2010 and 2040.
- The percent of households spending more than 35% of their income on housing increased from 16% in 1999 to 25% in 2009.

How this goal will be implemented:
- By supporting construction of additional affordable, permanent housing for the disabled, families, and seniors.
- With advocacy for workforce housing, walkable housing, accessory apartments, and accessible special needs housing.
- By encouraging renovation or replacement of aging public housing.
- By encouraging continued deconcentration of housing voucher use.

GOAL Enhance community character and protect neighborhoods

Why this goal is important:
- Typically, a home is a family’s largest investment.
- Many historic homes, downtown buildings, and institutional structures have been demolished over the past decade.
- Fire, police, and ambulance services are critical for protecting neighborhoods.

How this goal will be implemented:
- Through support for investment in existing neighborhoods.
- With advocacy for appropriate land uses, infill, and public improvements.
- By enhancing 911 communication, upgrading emergency response times, and continuing training.
- By working with others to preserve important historic properties.
- Through cooperation to reinvigorate the tree canopy in communities.
VIBRANT ECONOMY

GOAL Improve transportation access to businesses

Why this goal is important:
■ Transportation convenience and access is a major driver of economic development.
■ Daily commute times increased over 20% from 1990 to 2010, about ten minutes a day, which equates to 40 extra hours a year sitting in traffic.
■ Because the county is a large net importer of workers, getting these workers to their jobs is critical.

How this goal will be implemented:
■ By working with others to provide better access to employment centers with new and improved interchanges, slip ramps, widened and realigned roads, and new road connections.
■ By partnering to expand transit options.
■ Through regional efforts to improve freight movement.
■ With advocacy for preservation of existing airports.

GOAL Encourage development and transformative investment where infrastructure already exists

Why this goal is important:
■ The cost of building and maintaining infrastructure is lower where it already exists.
■ Many of the county’s business parks are old and need reimagining and reinvestment.
■ Reusing former industrial sites cleans the environment, provides jobs, improves property values, and helps control sprawl.

How this goal will be implemented:
■ Through advocacy for locating new development in growth areas.
■ By encouraging redevelopment of underutilized and vacant industrial land.
■ By working with others to modernize and adapt older office and business parks through zoning changes, infrastructure improvements, marketing, and private sector investment.
**THEMES AND GOALS**

**GOAL** Attract and retain businesses and vital community assets

**Why this goal is important:**
- Many businesses can locate anywhere and are not as dependent on raw materials or local markets as they used to be.
- Competition for growing businesses with well paying jobs is intense.
- Business growth depends on educated and trained workers, who typically earn better incomes than less educated peers.

**How this goal will be implemented:**
- By partnering with economic development organizations to assist businesses that want to expand or locate in the county.
- Through the county Workforce Investment Board collaborating with trainers and educators to retrain and support a skilled workforce.

**GOAL** Flexibly adapt to changing market conditions and demographics

**Why this goal is important:**
- With more people working from home and offices being redesigned into smaller, more collaborative spaces, the office market is in transition.
- Online retailing is changing both the retail and distribution industries.
- The aging population, interest of young adults in town living, and increasing diversity of the county will impact the location and type of new housing and other development.

**How this goal will be implemented:**
- By encouraging walkable, mixed use, transit-friendly, and entertainment-supportive places that will attract young workers and other key demographic groups.
- Through advocacy for designs and services that meet the needs of an aging population.
- By working with others to redevelop older retail properties.
GOAL  Facilitate the marketing of the county and its assets

Why this goal is important:
- Stronger marketing will help attract businesses, investment, visitors, and residents to the county.
- People do not automatically think of counties when they think of the place where they live or work.
- Montgomery County’s identity and strong assets are not as well known as they should be in the Philadelphia region.

How this goal will be implemented:
- Through partnerships with the Valley Forge Tourism and Convention Board and other tourism organizations for attracting visitors and increasing county-wide tourism.
- Through partnerships with economic development organizations to emphasize the assets of Montgomery County.
- By increasing awareness of county economic development resources.
CONNECTED COMMUNITIES
ENCOURAGE COLLABORATION AND PARTNERSHIPS AMONG GOVERNMENTS, BUSINESSES, INSTITUTIONS, SCHOOLS, HIGHER EDUCATION, AND OTHER STAKEHOLDERS

Montgomery County is very diverse. Its 62 municipalities, 22 active school districts, and many business and community organizations need to work together to accomplish their goals. The county can play a key role in fostering connections and nurturing partnerships that extend beyond local boundaries and, in some cases, provide connections to the region. To encourage collaboration and partnerships, the county will...

...participate actively in multi-jurisdictional and regional organizations, such as business organizations, Councils of Governments, and the Delaware Valley Regional Planning Commission

There are many organizations that have a significant impact on the built environment in two or more municipalities. Sometimes, these organizations work at cross purposes without even realizing it or are unaware of county goals and plans. The county, through the planning commission and other departments, will reach out to these organizations and establish better communication about county goals and resources while encouraging joint efforts, including public/private partnerships.

...expand multi-municipal planning, communication, and other cooperation efforts

Currently, there are four multi-municipal planning regions in the county. In each of these regions, the communities have adopted common comprehensive plans and made their zoning consistent with these plans. The county planning commission will continue to work with these four regions and will encourage other municipalities to consider multi-municipal planning. Besides broader, formalized planning, local municipalities can plan together on specific topics, such as village planning, corridor planning, and greenway planning.

...prepare and promote model ordinances, advisory guidelines, stormwater standards, and other documents that encourage consistent regulations

With 62 municipalities, the county has a lot of different ordinances and regulations. The county planning commission will continue preparing model ordinances and other informational publications that will help create more consistency across municipal borders.
Montco 2040: a shared vision

**MUNICIPAL COOPERATION**

County government will work collaboratively with other county-wide organizations, such as:

- Montgomery County Community College
- Valley Forge Tourism and Convention Board
- Montgomery County Housing Authority

The county planning commission will continue to support the four multi-municipal planning efforts while encouraging other municipalities to plan together.

Many organizations provide services to local municipalities. Two of the largest in the county are the Montgomery County Association of Township Officials (MCATO), which brings together local elected officials, and the Montgomery County Consortium, which brings together municipal staff members to arrange common services.

County government will work collaboratively with other county-wide organizations, such as:

- Montgomery County Community College
- Valley Forge Tourism and Convention Board
- Montgomery County Housing Authority

Cooperation with neighboring counties and regional organizations is very important. These efforts will include:

- Trail construction, such as the Schuylkill River Trail that connects into Philadelphia, Chester, and Berks Counties.
- Watershed planning, such as the Neshaminy Creek that extends into Bucks County.
- Highway and transit improvements, such as the recently completed 202 Parkway leading into Bucks County.
- Economic development and marketing, such as ongoing efforts to find suitable locations for relocating employers within the region as a whole.
- Comprehensive planning and land use initiatives.

The county will expand its outreach and communication, acting as a hub of information and facilitator among its many partners.
CONNECTED COMMUNITIES

Collaboration among Stakeholders

Improved Transportation Choices

Connected Trails and Greenways

Strong DOWNTOWNS and Destinations

IMPROVE TRANSPORTATION QUALITY AND EXPAND OPTIONS FOR COUNTY RESIDENTS AND WORKERS

The county’s transportation system connects people and places to each other and offers a variety of transportation choices for county residents and workers. To improve and expand these transportation options, the county will...

...work with PennDOT and local municipalities to improve road connectivity, expand Intelligent Transportation Systems, and eliminate road bottlenecks

Having an interconnected, finely-grained road network with many choices reduces congestion and provides alternative routes around accidents or other incidents. The Lafayette Street extension, for example, will do this.

The county already has an extensive network, and the vast majority of future road projects will improve intersections, repair roads, install Intelligent Transportation Systems, and widen roads, where appropriate. In addition, the county will advocate for new highway interchanges, roads, and bridges where more options are needed. More recently, the county has worked closely with PennDOT on its PennDOT Connects initiative, which coordinates PennDOT projects with local planning goals. (All transportation projects, whether providing a new road choice or not, are described in the final Vision chapter.)

NEW ROAD CHOICES

Numbers refer to the project list in the transportation section of the Vision Chapter.

<table>
<thead>
<tr>
<th>New Road Choices</th>
</tr>
</thead>
<tbody>
<tr>
<td>- New or Expanded Interchange</td>
</tr>
<tr>
<td>- New Road, Bridge, or Direction of Traffic</td>
</tr>
</tbody>
</table>

Measuring success

- Average commuting time improves or stays the same
- Increase in linked signal systems and miles of fiber optic cable for Intelligent Transportation Systems
- More commuters live in the municipality where they work
To give more transportation choices to county residents, the public transportation system will need to be improved. Currently, the 12-year PA transportation program for the region is putting $7.1 billion into public transportation capital projects and $8.4 billion into highway projects. This $7.1 billion is focused on upgrading SEPTA’s current system, which has suffered from extensive neglect for decades. Bridges, stations, equipment, retaining walls, and tracks need to be rebuilt, and this, understandably, will be the focus of SEPTA’s capital investment. Parking garages will also be added.

More frequent service, in general, is desirable, including extended hours or frequency in the evening. When funding becomes available, the first priorities for expanding service will be to provide more frequent service on the Manayunk/Norristown, Warminster, and West Trenton lines as well as extending service into the county’s largest employment center, King of Prussia, which is expected to cost $600 million. The next priorities are extending rail service to Pottstown and Wyomissing, Berks County at a cost of $433 million and extending service past Souderton and Telford to a new stop, Pennridge, Bucks County, at a cost of $250 million. Bus service will be expanded when and where ridership and costs warrant extended service.

**NEW OR EXPANDED TRANSIT SERVICE**

- Manayunk/Norristown Line—increase frequency to every 30 minutes throughout the day (number 107)
- Warminster Line—upgrade to double track to allow service throughout day in both directions (number 94)
- West Trenton Line—increase frequency to every 30 minutes throughout the day (number 116)
- Passenger Rail Extension to King of Prussia—provide a branch of the Norristown High Speed Line to King of Prussia (number 99)
- Passenger Rail Extension to Pottstown—extend the Norristown/Manayunk line to Wyomissing, Berks County through Royersford and Pottstown (number 98)
- Passenger Rail Extension to Telford—extend rail service from Lansdale to Pennridge, Bucks County through Hatfield, Souderton, and Telford (number 96)
- Cynwyd Line—increase frequency (number 175)
CONNECTED COMMUNITIES

...advocate for more sidewalks and pedestrian-oriented design of developments

Sidewalks and crosswalks should be provided in all growth areas, including commercial areas and residential areas with more than one home per acre. On the Future Land Use Map, this includes areas identified as Regional Mixed Use Center, Business Area, Community Mixed Use, Town Center, Village Center, Town Residential, and Suburban Residential.

Developments, streets, and buildings should be designed to encourage walking with buildings close to the street, front doors in buildings, direct and separated pedestrian connections to streets, short blocks, streetscaping, traffic calming, and interconnected streets. Local municipalities should consider installing sidewalks in existing walkable areas with important destination, such as schools, shopping centers, and parks.

The county will advocate for better walkability, will install sidewalks on county roads in appropriate locations when the roads are rebuilt, will conduct walkability audits with local communities, and will prepare a walkability plan. The county has done this with Walk Montco, a sidewalk plan and pedestrian policy guide. The planning commission also partners with the county’s Department of Health and Human Services to conduct walk audits as part of Safe Routes to School projects.

For ease of passing and handicapped accessibility, sidewalks should be at least five feet wide in more active areas, with a five foot setback from streets. Utility lines, walls, slopes, and other features may require adjustments to this standard.

In downtown areas, sidewalks should be 8 feet wide in addition to any area needed for opening doors, landscaping, or street furnishings.

<table>

…cooperate with PennDOT, bicycling organizations, and local municipalities to add bike-friendly improvements to roads and bike facilities to developments

Bicycling on local roads can be difficult. Ideally, roads should have separate, marked bike lanes. Paved shoulders, especially when striped, offer some protection for on-road cyclists, and wider travel lanes next to curbs can be helpful. These facilities should be added to the primary and secondary bicycle routes identified on the map below. The county’s recent Bike Montco policy document lays out a bike plan for the county. Bike tourism routes and a low stress streets app have followed to help implement this plan. In addition, PennDOT should maintain bicycle lanes on PennDOT roads, local municipalities should consider bike sharing programs, and SEPTA should improve bike storage and access at its train stations.

Road diets, as proposed on Virginia Drive in Upper Dublin, First Avenue in Upper Merion, and Washington Lane in Cheltenham, provide a great opportunity to accommodate bicyclists within the existing cartway.

…collaborate with businesses, transportation management associations, chambers of commerce, and others to improve travel demand management

Traffic congestion can be reduced in more ways than physically improving roads. This is called Travel Demand Management, which give workers more flexibility and choice in getting to work. This approach encourages behavioral changes by commuters through telecommuting, compressed work weeks, flex time, car sharing, and carpooling. Building park and ride lots, using high occupancy vehicle lanes, and congestion pricing on toll roads support these changes. Commuters can also be encouraged to take public transit, bicycle, or walk to work.

The county will work with its two transportation management associations, the Greater Valley Forge TMA, which covers the half of the county nearest Chester County, and the Partnership TMA, which covers the half closest to Bucks County, to implement effective Travel Demand Management throughout the county.

**BICYCLE ROUTES**
EXPAND AND CONNECT COUNTY TRAILS, LOCAL TRAILS, GREENWAYS, NATURAL AREAS, AND PARKS

Montgomery County’s trails have become a hallmark of the county, connecting communities, greenways, and local trails to each other. To bolster this network, the county will...

...expand the county trail system

The proposed county trail system consists of 257 miles of trails; so far, 84 miles of this network have been built. To create better connections to neighboring counties and to create more options within the county, the proposed trail system has been expanded from its original total length of 165 miles. In some locations, these trails, such as the Schuylkill River Trail, will be paved, multi-purpose trails. In other locations, they will be gravel or narrow walking trails. The county will own and maintain many of the trails, but some of them will be owned and maintained by local municipalities or other entities.

Expanding the trail system is a county priority. The highest priority trails, expected to be completed over the next 5 to 10 years, are listed below. These proposed projects fill in missing links, create trail loops, and/or extend the trail system into the county’s most populous areas.

Montco 2040: a shared vision
CONNECTED COMMUNITIES

...work with local municipalities to connect to the county trail system

The proposed county-wide trail system includes trails that are built and operated by the county, such as the Schuylkill River Trail, and trails that are built and managed by local municipalities. For example, the Power Line Trail in Horsham and the Liberty Bell Trail in Hatfield Borough were built by local municipalities. Other municipally-built trails, such as the Cynwyd Heritage Trail in Lower Merion or the Skippack Trail in Skippack, have created important connections and have been added to the original county wide trail system.

The county encourages local municipalities to build trails and to connect to the overall county system. Whenever feasible, local open space purchases should connect into the local trail system and the county system. To help communities, the county can provide invaluable expertise on trail design, construction, operation, grant preparation, and maintenance.

Measuring success

- Increase in miles of municipal trails connecting to the county trail system

Lower Merion’s Cynwyd Trail has become a source of pride for the community. Over time, it should connect with the Schuylkill Trail in Manayunk in one direction and extend to Fairmount Park in West Philadelphia in the other direction.

Trails can connect residential neighborhoods with...

... community focal points, like Collegeville’s new trailhead park where Main Street and the Perkiomen Trail intersect.
...increase county parkland in greenway corridors while working with local municipalities to preserve their greenways

The county’s greenways, which are primarily along its streams and rivers, connect the county’s natural environment, providing important habitat preservation, wildlife corridors, and floodwater storage. With the county’s park system and trail network, these greenways have also become important places for recreation, wellness, and social interaction, improving the county’s overall quality of life.

Many of the county’s parks are located along a greenway, and, as opportunities arise, the county will look to expand its park holdings within greenways. In addition, the county will continue expanding its trail system within greenways, providing multiple opportunities for residents to interact with nature.

However, most of the greenway corridors are not near county parkland, and local municipalities, both through their park systems and regulations, should work to preserve these environmentally sensitive corridors. Private property owners can also play an important role in greenway preservation.

GREENWAYS
In this hyper-connected digital age, people seek places to connect in person. The county’s schools, places of worship, and shopping malls meet this need to a certain extent. Other venues that draw from even wider demographics also meet this need and are becoming more popular as gathering places, including downtowns, cultural venues, and libraries. To support these places, the county will...

...collaborate with businesses, municipalities, chambers, downtown organizations, and others to revitalize downtowns

Many county downtowns have been revitalized over the past decade, such as Ambler, Narberth, Conshohocken, and West Marshall Street in Norristown, while others are still in need of revitalization. In the county and across the region, places have revitalized by recreating employment centers, strengthening arts and culture anchors, accommodating immigrants, attracting nearby wealth, and/or building new housing.

A strong organization can do marketing, run special events, pursue grants and state aid, maintain public spaces, conduct social networking, run merchandising programs, host online discount sites, etc.

Multi-layered amenities - food, entertainment, parks and plazas, beautiful landscaping, streetscaping, attractive buildings and signs, and accessible parking - create an appealing public realm for visitors.

Measuring success

- Increase in residential property values in downtown areas
- New construction in and near downtowns
- New businesses in downtown communities
According to the national Main Street Program, main streets can revitalize through good design, strong organizations, effective promotion, and economic restructuring. National studies of downtowns find that the most successful ones are managed like a mall, are appropriate for retailers, meet the needs of their market, are safe, have strong advocates, are well maintained, are anchored by important civic and cultural institutions, are walkable, and have a unified, defined area. Above all, these places have strong private and public leadership.

The county does not have a direct role in downtown revitalization but can support revitalization efforts by helping to prepare revitalization plans, encouraging businesses to locate in downtowns, supporting redevelopment planning efforts, working with PennDOT to provide streetscaping and walkable transportation improvements, working with SEPTA to improve public transportation, marketing the county’s downtowns, assisting in exploring the possibility of establishing a land bank, connecting county trails with downtowns, explaining new state laws and programs to municipalities, and a host of other supportive and collaborative efforts.

**Creating Great Community Places**

For downtowns to be vibrant, their public spaces must be vibrant. These parks, plazas, streets, sidewalks, community centers, and libraries are the heart and soul of the community. The Project for Public Spaces published 11 key elements needed to transform these spaces:

- The community is the expert
- Create a place, not a design
- Look for partners
- You can see a lot just by observing
- Have a vision
- Start with the petunias: lighter, quicker, cheaper
- Triangulate by putting different attractions together
- Be persistent despite naysayers
- Partners and activities should drive the design
- Money is not the issue
- You are never finished

**F.A.C.E.—**Food, arts, culture, and entertainment form the backbone of most successful downtown revitalization efforts. Communities should conduct market analyses and establish appropriate market niches for their downtowns.

Public spaces should have multiple activities to appeal to a wide range of people.
CONNECTED COMMUNITIES

...work with arts organizations, Creative MontCo, the Valley Forge Tourism and Convention Board, and community groups to raise the profile of arts and culture activities in the county

The county has many hidden arts and culture gems and a strong interest in the arts, yet many residents and arts organizations feel disconnected from each other. Creative MontCo, a nonprofit initiative working with partners at the tourism and convention board and community college, is raising the profile of the arts community, creating connections in this community, using arts for revitalization and placemaking, and strengthening the creative economy.

The county, through its parks and historic sites, hosts many arts and culture events. The county will also work with Creative MontCo and other groups to raise the profile of the arts county-wide. In addition, county economic development efforts recognize the importance of the creative sector to the county economy.

...strengthen the county library and collaborate with other independent public libraries in the county on library resources and services

Despite popular perceptions to the contrary, public libraries are being used more and more, particularly for internet access, egovernment, ecommerce, civic engagement, training, tutoring, and literacy. The county library will need to continue adapting to changing information needs and cooperating with other independent libraries in the county to meet the ever increasing demands on their services. The county’s colleges and universities can help meet this demand by making their libraries even more accessible to the general public.

Arts and culture events and venues attract a diverse audience to the county’s downtowns and other community gathering places.

Libraries are much more than books. They are gateways to the community, government, the internet, and entrepreneurship.

Measuring success

- Greater attendance at arts and culture venues
- Increase in items circulated
- More usage of the main county library
- Larger number of municipalities that have a library
Arts and culture facilities will remain a focal point for communities along the Lansdale/Doylestown line. Transit oriented development is also important.

Business parks, like Fort Washington, King of Prussia, and Bala Cynwyd, as well as the former Willow Grove Naval Air Station can become new, mixed use community focal and gathering places.

Business parks, like Fort Washington, King of Prussia, and Bala Cynwyd, as well as the former Willow Grove Naval Air Station can become new, mixed use community focal and gathering places.

Pottstown’s revitalization can take advantage of the arts, the Schuylkill River trail, the community college, and new entertainment venues.

Norristown, as the county seat, is a priority for revitalization. With its Arts Hill festival, the extension of Lafayette Street, future trail junction, and riverfront redevelopment opportunities, Norristown is poised for significant redevelopment.

DOWNTOWN AND LIBRARY FOCAL POINTS

The Perkiomen Trail and county park system are key assets for communities along the Perkiomen Creek.

Municipalities without their own libraries or a county library branch building might want to increase library access for their residents. Any new library buildings should be designed as community focal points, preferably in centrally-located walkable locations near residents and commercial centers.

Communities along the Schuylkill River, like Royersford and Bridgeport, should continue reclaiming their riverfronts and creating connections to the county trail system.
SUSTAINABLE PLACES
SUSTAINABLE PLACES

SUPPORT A MODERN, RESILIENT, GREEN, AND ENERGY-EFFICIENT INFRASTRUCTURE NETWORK

Infrastructure, including roads, bridges, sewers, water, power, and communications, is the backbone of land use and economic development. It’s often taken for granted that it will function well; however, many parts of the infrastructure system are aging and will need to be modernized. In addition, climate change is putting pressure on the infrastructure network, highlighting the need to keep this network resilient. To improve infrastructure, the county will...

...improve county-owned roads and bridges

Montgomery County owns 74 miles of roadways and 133 bridges, 106 of which have spans of 20 feet or more. The county will be conducting an extensive modernization of its system of roads and bridges. The county’s Motor Vehicle Registration Fee provides a dedicated source of funding to continue these improvements. Since 2012, the county has completed 29 bridge projects. There are currently 20 active bridge projects in design, three underway in construction, and another 10 bridges about to begin construction.

The county will develop a program and schedule for road repaving and rehabilitation. Ridge Pike in Plymouth is currently a priority for rehabilitation. Portions of Ridge Pike, Butler Pike, Bergey Road, East Sumneytown Pike, Schultz Road, Horsham Road, Plymouth Road, and Old Sumneytown Pike are priorities for repaving. The county transportation authority will take the lead on purchasing land when it is needed for road and bridge improvements.

THE COUNTY HAS CREATED A CAPITAL IMPROVEMENT PLAN FOR BRIDGES.

Top Candidates for Bridge Replacement - these bridges will need to be replaced and include Arcola Road, Knight Road, Lutheran Road, Bergeys Mill Road, Morris Avenue, Rostowski Road, Moyer Road, Davis Grove Road, Paper Mill Road, Moreland Avenue, Butler Pike, Stump Road, Swamp Pike, Easton Road, Sterigere Street, and Ridge Pike bridges.

Top Candidates for Bridge Rehabilitation - these bridges do not need replacement but will need rehabilitation. They include Old Gravel Pike, Dietz Mill Road, Simmons Road, Black Rock Road, King Road, Conshohocken State Road, Peevy Road, Old Reading Pike, Line Lexington Road, Green Lane Road, Deep Creek Road, Sumneytown Pike, Germantown Pike, Old Sumneytown Pike, Ashmead Road, Old Gulph Road, Ashbourne Road, and Mount Pleasant Avenue bridges.

Candidates for Bridge Rehabilitation or Replacement - these historic stone arch masonry bridges or steel truss bridges have enough historic significance to be studied to see if they can be rehabilitated. If rehabilitation is not feasible, they will need to be replaced. This category includes Fetters Mill Road, Washington Lane, Valley Green Road, Swedesford Road, Price Road, Keller Creamery Road, Faust Road, Keith Valley Road, Keim Street, Garges Road, Trumbauer Road, Fruitville Road, and Mingo Road bridges.

Candidates for Elimination or Turnover - Because of traffic volumes, significance, or other factors, some bridges should be demolished or turned over to other government entities or private property owners. These include Camp Wawa Road, Snyder Road, and Hedrick Road bridges for elimination. Fern Avenue, Old Gravel Pike, Rupert Road, and McLean Station Road bridges should be turned over to other entities.

Measuring success

- Increased number of repaired county bridges
- More miles of resurfaced or rebuilt county roadways
...advocate with PennDOT and local municipalities to right-size roads, install traffic calming, build green streets, install sidewalks, and use other safety and environmental improvements for streets

Streets are the most public places in the county, the connecting thread between communities. Their primary role is to move vehicles, both motorized and non-motorized, but they also have an impact on adjoining properties, the walkability of neighborhoods, the image of communities, and stormwater. There are a number of approaches PennDOT, the county, local municipalities, developers, and property owners can use to lessen these impacts. The county adopted a complete streets policy in 2019 to address all modes of transportation during county road and facility improvement projects.

**Right-Sized Roads** - Roads can sometimes be too small or too large for the amount of traffic volume they carry. Many roads built in the 1950s and 1960s were made wider than they need to be, and right-sizing these roads is called a road diet. Often road diets incorporate bike lanes, landscaped medians, rain gardens, on-street parking, crosswalks, and sidewalks. Road diets often increase the efficiency of vehicular traffic flow, make the road safer for everyone, and provide opportunities to green the road with best management practices.

**Traffic Calming** - Traffic calming is designed to slow down vehicular traffic and make roads safer and more appealing for pedestrians, bicyclists, and people on adjoining properties. The most common traffic calming techniques used in the Philadelphia area include speed humps, traffic circles, roundabouts, landscaped medians, speed tables, curb extensions or bumpouts, on-street parking, and streetscaping.

**Green Streets** - Green streets incorporate landscaped areas designed as stormwater best management practices. Instead of going directly into pipes, runoff is directed into landscaped areas that allow water infiltration and filtering of pollutants. Green street techniques include stormwater curb extensions, stormwater planters, vegetated swales, and rain gardens.

---

**Measuring success**

- New examples of road diets, traffic calming, and green streets completed in the county
- Fewer accidents on roads

---

Bumpouts in Jenkintown were used to narrow West Avenue, making it easy for pedestrians to cross from one side to the other.

Keswick in Abington uses streetscaping, landscaped islands, and roundabouts to calm traffic.
… advocate with sewer authorities, the state Department of Environmental Protection, residents, and local municipalities to upgrade municipal sewage collection systems and treatment plants in the most environmentally-friendly way

Sewer service expansions and sewer system upgrades are regulated by plans produced under the Pennsylvania Sewage Facilities Act (Act 537). These plans are reviewed by the state Department of Environmental Protection and the Montgomery County Planning Commission. The Montgomery County Health Department is responsible for evaluating, permitting, and inspecting any on-lot sewage proposals.

Many of the county’s sewage plants and sewer lines are getting old and will need to be upgraded. When upgrades occur, inflow and infiltration should be reduced, storm sewers and sanitary sewers should be separated, if they are combined, and ozone or ultraviolet light disinfection should be considered. In addition, if sewage sludge is currently being incinerated, authorities should consider composting as an alternative.

In Rural Resource Areas where on-lot sewage disposal will be used, the preferred approach is subsurface disposal, which allows water to percolate back into the water table. Other preferred alternatives, in descending order of preference, include individual residential spray irrigation systems, community lagoon system with spray discharge, community lagoon system with subsurface discharge, and community sand mound. Mechanical treatment and/or direct stream discharge are less preferred alternatives, because they may encourage development at higher densities.

**EXISTING AND FUTURE SEWER SERVICE AREAS**
... work with water suppliers, sewer authorities, the state Department of Environmental Protection, and local municipalities to match water supply areas, sewer service areas, and Designated Growth Areas.

Water supply and sewage treatment services are provided by municipal authorities or private utility companies. The county will advocate with these agencies to coordinate their efforts with local plans, county plans, and each other.

Generally, sewer and water service areas should:

- Serve Designated Growth Areas, as shown in the county’s Future Land Use Map.
- Only be extended into Rural Resource Areas because those areas are already served by either public sewer or water, have concentrations of failing on-lot sewage systems, have water supply problems, or contain cluster development with significant open space preservation. Cluster development should have at least 60% open space, a density of less than one home per acre, and a location within a half mile of an existing public sewer and water system.
- Match each other’s service areas as much as possible. It is particularly important to avoid having on-site wells serving developments served by public sewers, because this pulls water out of the water table and discharges it into streams rather than allowing it to infiltrate back into the ground.

**EXISTING AND FUTURE WATER SERVICE AREAS**
... advocate with water authorities to protect water sources and encourage water conservation

Overall, Montgomery County is well supplied with drinking water - the county has 17 large public water suppliers and is generally blessed with good ground and surface water supplies. Nevertheless, droughts periodically occur in the region and the water supply can become polluted. The county will work with water purveyors, the state, and municipalities to address these issues. Also, the county Department of Health and Human Services will increase public education and outreach on conservation during periods of drought.

To protect water supply, water suppliers should:
- Replace aging pipes, where needed, and upgrade treatment facilities, making them as energy-efficient as possible.
- Continue interconnecting adjoining systems.
- Educate residents about conservation practices they can use at home and work, including installation of low flow fixtures and use of efficient landscaping and lawn maintenance.
- Improve loss detection on water lines and fix leaks.

Municipalities can:
- Create source water protection plans, including wellhead protection.
- Adopt natural features protection ordinances, such as wetlands, steep slope, floodplain, woodlands, and riparian corridor ordinances.
- Adopt stormwater best management practices to encourage groundwater infiltration.
- Require stormwater best management practices for runoff from farms, golf courses, school, large corporate properties, playing fields, and construction sites.
- Use low density zoning, cluster zoning, and transfer of development rights to keep development and impervious areas out of headwaters, ground water recharge areas, well-fields, and other sensitive areas for the water supply.

Measuring success

- Decrease in water usage per resident
- Improved interconnections between water suppliers

Green roofs are a stormwater best management practice.

Planting trees in riparian corridors and protecting trees and understory growth in these corridors helps protect water quality.
SUSTAINABLE PLACES

...encourage trash haulers, citizens, businesses, and local municipalities to increase recycling and reuse, while reducing solid waste generation

Montgomery County has a Municipal Waste Management Plan that examines whether the county has enough capacity for the approximately 650,000 tons of waste produced annually and outlines methods of improving waste recycling and reuse. The current plan will be updated by the end of 2014.

Right now, the county has enough capacity for the waste it generates, and this is expected to continue in the future. About 28% of the waste stream is recycled, which is below the state goal of 35%. The county will work with its partners on educational and outreach campaigns to move the recycling rate towards the state goal of 35%. In addition, the county will continue to hold collections for special waste items, such as household hazard waste and outdated electronics.

... adapt to changing energy and communications needs and assist municipalities adjusting to these changes

One of the best ways to address energy needs is to reduce energy consumption, which saves costs and reduces greenhouse gas emissions. The county recently created a new initiative, the Energy Reduction and Sustainability (ERAS) program, for county facilities and operations. The county will implement energy conservation measures, explore opportunities to use renewable energy sources, consider green vehicles when vehicle purchases are being made, and promote energy conservation and sustainability with its employees, visitors to county facilities, and citizens-at-large. In addition, the county planning commission will continue to offer to prepare sustainability plans for local municipalities.

Measuring success

- Increase in recycling rates
- Decrease of municipal solid waste generated
- More special waste collection events held

Disposing of waste properly, from household hazardous waste to unwanted prescriptions, will continue to create the need for collection events.

Electronic appliances should be recycled rather than put into the general trash stream. Unused drugs should be disposed of at municipal drug drop-off boxes. The county is a co-sponsor of hazardous waste collection events. Several each year are held around the county.
With the Limerick nuclear power plant and the Covanta Plymouth Renewable Energy Facility (a waste-to-energy facility) producing large amounts of electricity, Montgomery County meets its current and future needs. There might be demand for small natural gas power plants designed to meet short-term peak load or other specific needs, and these should be located on large properties with few environmental constraints in industrial areas with access to cooling water, natural gas transmission lines, and the power grid.

Because of its limited environmental impact, small scale renewable energy, such as solar, wind, geothermal, and hydroelectric facilities should be installed around the county in appropriate locations. For example, the county is pursuing a permit for a small-scale hydroelectric facility on the Norristown Dam. Local municipalities should adopt ordinances allowing renewable energy and can use guiding ordinances prepared by DVRPC in cooperation with the county.

Currently, the county is crossed by a variety of electric transmission line corridors and petroleum or gas pipelines. Creation of new corridors should be avoided; however, it is conceivable that upgrades and expansions to existing corridors might happen, possibly for new pipelines shipping natural gas from upstate Pennsylvania to the Philadelphia region. In these cases, construction should be done with as minimal an impact on the natural environment and nearby development as possible.

Broadband access has become an infrastructure necessity as county residents rely upon it for daily work and educational needs. The county encourages innovative high-speed communications systems to be installed in key residential, commercial, and industrial locations. The major issue with communications is tower siting and design. Whenever feasible, new communication antennae should be attached to existing taller structures, such as buildings, smoke stacks, water towers, or other communications towers. In addition, the design and color of new towers should blend into their surroundings, and towers should have as little an impact on neighboring properties as possible. Towers should also be the minimum height necessary to achieve the required broadcasting objectives and placed in locations that minimize their impact on the surrounding community.

These wind turbines in Pottstown help reduce greenhouse gas emissions. Energy conservation, helped by tools like the new smart meters, can help even more.

Electric vehicle charging station at the Montgomery County Community College. To encourage alternative fuel vehicles, more charging stations and natural gas stations will need to be built in the county and region.

Measuring success

- Reduction in county energy costs
- Incorporation of renewable energy for county needs
- Municipalities adopting new ordinance standards for energy and communication uses
- Municipalities incorporating sustainable practices into their operations
IMPROVE STORMWATER MANAGEMENT AND REDUCE THE IMPACT OF FLOODING

Stormwater control and flooding are key issues that transcend local municipal boundaries. To improve stormwater facilities and address flooding from ever-more-common storms, the county will...

...implement required county stormwater improvements

Because much of the pollution reaching local streams is from runoff rather than sewage treatment plant or industrial discharge pipes, the federal government requires municipalities control pollution from water runoff. The county, like its 62 municipalities, must meet these federal MS4 permit requirements. The county proposes to continue:

■ Installing Green Stormwater Infrastructure at county sites wherever practicable.
■ Expanding education on stormwater issues for county employees, contractors on county projects, and visitors to county facilities.
■ Training its departments on methods to reduce pollution in stormwater.
■ Maintaining the database and website to provide information to the public and municipalities on stormwater systems.
■ Mapping all stormwater systems and inspecting outfalls for illicit discharges.
■ Adopting rules for construction site stormwater runoff on county properties.
■ Enacting a post-construction stormwater runoff ordinance or standardizing procedures.
■ Updating procedures for preventing pollution, particularly for vehicle maintenance, fueling and washing, stormwater facility maintenance, and storage of materials.

Measuring success

- Progress on the permit requirements of public education, public involvement, illicit discharge detection and elimination, construction site stormwater control, and pollution prevention

This rain barrel at Green Lane Park helps with the county’s MS4 stormwater permit requirements.
... complete and update watershed stormwater management plans

Traditional stormwater control regulations treat all properties within a watershed the same for release of stormwater; however, from a flooding standpoint, it actually makes sense to have different rates of discharge from stormwater basins and other stormwater control facilities. When a property is right next to a river, it might make sense to have the water get into the river quickly before more upstream stormwater reaches that point, while properties in headwaters areas might have a slower rate of discharge.

Because of this, the state requires counties to prepare stormwater management plans for watersheds, known as Act 167 plans. As shown in the map below, Montgomery County has prepared many of its plans. For the future, the county proposes to create one county-wide plan for all watersheds, including updates of watershed plans that have already been completed. This plan will focus on problem areas of county-wide significance.

**DESIGNATED ACT 167 WATERSHEDS**

- More watersheds with a current plan
- Creation of a county-wide stormwater plan
advocate with local municipalities and developers for best stormwater management practices

Over time, the techniques for controlling stormwater have evolved to more naturalized systems to mimic the hydrology of the property that existed before development. So, if a quarter of the stormwater flowed off the property before it was developed while the rest was infiltrated into the ground, absorbed by plants, or evaporated, then ideally only a quarter should flow off afterwards. While it may be difficult to duplicate pre-development conditions, post-development hydrology should mimic these conditions as much as possible in both land developments and infrastructure projects.

Stormwater Best Management Practices (BMPs) attempt to mimic a more natural water cycle and include naturalized basins, vegetated swales, disconnected impervious surfaces, rain gardens, bioretention areas, porous pavement, infiltration basins, sediment forebays, stormwater extended detention ponds, stormwater ponds, and constructed wetlands. Impervious surfaces should be minimized for all new development.

The county will continue encouraging stormwater BMPs in both new and existing developments, including retrofits of existing facilities. The planning commission’s popular Sustainable Green Parking Lots Guidebook, published in 2016, has helped municipalities incorporate BMPs into parking lot retrofits. Funding is available from the Montco 2040 grant program to aid with this type of work. The county should continue to maintain a database of stormwater BMP projects and green developments, and develop and disseminate new educational information on stormwater BMPs. In addition, the county will continue to advocate for adoption of its model Riparian Corridor ordinance, which requires a protected vegetated buffer next to streams.

Bioswales and porous paving allow water to infiltrate into the ground and help with groundwater recharge.

Because trees reduce stormwater runoff and prevent erosion, they are particularly important near rivers and streams.
… work with local municipalities, developers, emergency providers, PennDOT, SEPTA, and emergency management agencies to limit development in the floodplain and limit the impact of flooding

With climate change, flooding seems to be a more common problem. The best method of dealing with flooding is to keep development and fill out of the floodplain. All local floodplain ordinances should prohibit fill and buildings within the floodplain, except for brownfield sites in redeveloping areas. Communities that allow buildings in the floodplain must require them to be elevated and floodproofed. Auto-related uses and other uses that could have a strong negative environmental impact should be prohibited in all floodplain areas.

The impact of flooding can be reduced through an emergency flood warning system; building code enforcement for floodproofed buildings; good drainage system maintenance; acquisition and demolition of structures in the floodplain; improved stormwater management; re-greening of old development; retrofitting and floodproofing of existing structures in the floodplain; installation of flood control structures; and natural resources protection.

Recognizing that flooding does not affect all populations equally, the county should work to identify populations that may be disproportionately affected by flooding, assist these populations in understanding the magnitude of the threat, and identify how these populations can become more resilient. Strategies to address flooding threats and hazards like heat island effect should be addressed in the county’s Hazard Mitigation Plan.

The county has a model floodplain ordinance that it will continue sharing with local municipalities while reviewing municipal floodplain ordinances for their compliance with federal regulations. The county will continue to implement its Hazard Mitigation Plan, which has a number of recommendations for addressing flooding. And the county will encourage partners to plan for flooding, which will continue to occur.

New buildings should not be put in the floodplain, except for buildings on brownfield sites in redeveloping areas.
CONSERVE NATURAL RESOURCES, ENVIRONMENTALLY-SENSITIVE AREAS, AND FARMLAND

Montgomery County has many unique natural resources and open space that should be conserved through a variety of methods. To conserve these areas and take on a leadership role, the county will...

...advocate with local municipalities, conservation groups, the state, property owners, businesses and others to permanently protect natural resources, open space, and rural areas.

Successful natural resource and open space preservation will be achieved through partnerships involving the county, municipalities, the state, conservation groups, property owners, foundations, and private funders. This unprotected open space falls into two categories:

- **Conservation Opportunity Areas**—generally, these areas are environmentally significant landscapes that connect preserved open space, primarily existing parks and conservancy lands. Conservation Opportunity Areas consist of streams, rivers, wooded highlands, forested floodplains, wetlands, and diabase geology areas. These areas might also include adjacent golf courses, cemeteries, and large institutional properties.

  When feasible, these areas should be protected through fee-simple purchase or a conservation easement. Recognizing the success of past initiatives, the county should explore options for conservation programs that promote active tourism, protect critical conservation areas, increase opportunities to exercise, and green the county’s towns. Other techniques can be useful, such as encouraging development on the least environmentally-significant part of a property, transfer of development rights, land stewardship, and adopting steep slope and woodland preservation ordinances.

  A recently launched “Return on the Environment” project looks to highlight the ways that the county’s open spaces add economic value to many aspects of our lives. In addition, the planning commission is undertaking a strategic planning initiative to focus our open space planning and land acquisition efforts.

  On some properties, techniques like a cluster zoning ordinance could allow development on less-significant parts of the site while greenways, environmentally sensitive land, historic properties, and viewsheds are preserved.

- **Rural Resource Areas**—these rural areas primarily consist of farms, scattered low-density homes, and villages. The county already preserves farms through its farmland preservation program, and local municipalities sometimes preserve farms and other rural landscapes too. Communities can use land preservation cluster ordinances, transfer of development rights, and farmland zoning to preserve low density Rural Resource Areas.

Measuring success

- Increase in acres of open space preserved
- New municipal ordinances protecting open space and natural resources
- Percent of new development in areas shown as open space or rural resource areas on the county’s future land use map

Greenways and stream corridors, like Saw Mill Run Creek, are vulnerable areas that should be protected.
Preservation Plan

- Preserved Farms
- Existing Preserved Open Space
- Conservation Opportunity Area
- Rural Resource Area
...permanently protect additional environmentally-sensitive parkland while improving county parks

The county’s parks and historic sites are important assets that will be expanded and improved over time in accordance with park master and resource management plans, often through partnerships with private sector and non-profit organizations.

The trend of preserving additional land for public use/and or conservation should be encouraged over the next ten years, with logical park expansions and preservation of key natural resource areas continuing to be a priority. However, assembling small parcels or corridors of parkland, especially in urban and downtown areas, should also be a priority in order to bring nature into developed areas, green the places where people live, and spur revitalization of older portions of the county. Success should be measured in terms of gaps completed, connections made, public access provided, landscapes restored, and wise stewardship policies instituted rather than in terms of specific acreage goals met.

The county will work to maintain the environmental quality of its parks through good stewardship. This will include removal of invasive plants, use of native plants when possible, installation of stormwater best management practices, use of stream stabilization projects, and implementation of wildlife control, including deer, tick, mosquito, and geese management. In addition, the county will work with federal, state, and local agencies to ensure that their parks continue to thrive as great amenities for the county.

### Conservation Objectives

**County Parks, Historic Sites, Natural Areas**

- Provide appropriate public access to underutilized or unopened sites
- Acquire/protect parcels that fill gaps
- Develop master site and resource management plans for each site
- Institute stewardship policies and best management practices

**County Trails and Greenways**

- Make trail and greenway connections between county sites
- Promote completed trail network as collaborative linear park
- Facilitate local connector trails when expanding or improving county parks or trails
- Protect context essential for trail experience

**Schuylkill River Corridor**

- Acquire/preserve/connect key remaining riverfront areas
- Protect special properties as greenway anchors
- Mentor/assist municipalities to create riverfront greenway districts

**Special Conservation Landscapes**

- Acquire/protect relevant properties within NAI conservation landscapes
- Give special protection to NAI conservation landscapes within county sites
- Promote good stewardship throughout each NAI conservation landscape

### Priority Project Areas

- Sunrise Mill; Mingo Basin; Spring Mountain; Green Lane Park
- Spring Mountain; Pennypacker Mills; Pottsgrove Manor; Lorimer Park
- Spring Mountain; Sunrise Mill; Lorimer Park
- All county sites
- Lock 60 to Upper Schuylkill Valley Park; Cross County Trail; Swamp Creek Greenway
- Perkiomen Trail; Pennypack Trail
- All county sites
- Perkiomen Trail; Pennypack Trail; Schuylkill River Trail
- West Pottsgrove riverfront to Schuylkill Canal area
- Barbadoes Island; Oaks Basin
- Royersford; Norristown; Pottstown
- Bethayres Swamp; Unami corridor Sunnystown to Crusher
- Green Lane Park; Spring Mountain; Sunrise Mill
- All conservation landscapes

### Measuring success

- Improvements installed in county parks
- Proposed Conservation Opportunity Areas preserved as county parkland
- Decrease in deer/vehicle accidents
Over the past 20 years, Montgomery County’s Open Space Programs were the major impetus for land preservation throughout the county. From 1993 through 2014, preserved open space in Montgomery County increased by more than 18,000 acres, an average yearly increase of 900 acres.

Preserving land highlighted in the Natural Areas Inventory preserves the county’s ecological resources. Public access should be carefully considered and managed to avoid detrimental impacts to these sensitive areas.
Central Perkiomen Valley Park
This park, consisting of 464 acres, is a series of activity areas along the Perkiomen Creek. Future improvements or expansions might include:
■ Filling in of gaps in parkland along Hollywood Drive and Perkiomen Creek Road.
■ Addition of fitness stations along existing trail.
■ Cooperation with Graterford Prison along the Perkiomen Creek and its tributaries.

Green Lane Park
This park, consisting of 3,062 acres, is a multi-use park centered around two lakes and a reservoir. Future improvements or expansions might include:
■ Expanding trailhead parking near Ward Road, possibly on new property.
■ Creating a lower loop trail near Green Lane Road.
■ Considering partnerships for an adventure course or similar activity.
■ Providing a greenway trail to Mill Hill along the Perkiomen Creek
■ Experimenting with pontoon boat environmental education tours
■ Addition of fitness stations along trails

John James Audubon Center at Mill Grove
This historic site, consisting of 249 acres, is operated in partnership with the National Audubon Society. Future improvements might include:
■ Development of a new museum and visitor center, including renovations and upgrades to the historic structures.
■ Upgrading the trail system.
■ Providing a separate pedestrian bridge at Egypt Road to improve the existing Audubon Loop Trail.
■ Winterization of the pavilion.
■ Improved entrance and bus circulation.
Lock 60 at the Schuylkill Canal Park
This park, consisting of 64 acres, features a working canal lock, a towpath, and 2.5 miles of canal. Future improvements might include:
- Completion of the towpath restoration.
- Connector trail between Lock 60 and the Upper Schuylkill Valley Park.
- Improvements to the mule tenders house as an interpretive area with signage.

Lorimer Park
This park, consisting of 230 acres, features trails and picnic areas along Pennypack Creek. Future improvements or expansions might include:
- A trail connection to the north to the Bethayres Swamp, Huntingdon Valley, Bethayres, and Bryn Athyn.
- A trail connection south to Rockledge.
- Fitness stations along the trail.
- Acquiring additional wood and meadow land near Moredon Road.

Lower Perkiomen Valley Park
This park, consisting of 90 acres, has playing fields, trailhead parking for the Perkiomen and Schuylkill trails, and picnic areas along the Perkiomen Creek. Future improvements might include:
- A loop trail.
- Fitness stations along the trail.
- Pedestrian bridge connecting to the Audubon loop.
- Landscaping to provide buffering from Route 422.
- Interior upgrades and repairs to buildings.
Norristown Farm Park
This park, consisting of 690 acres, is leased from the state and includes active farm fields, trails, and picnic areas. Guaranteeing permanent protection of the park is critical. Future improvements or expansions might include:

- Expansion of the Whitehall Road parking lot.
- Fitness stations along the trail and trail extensions to Einstein Hospital and the Elmwood Park Zoo, possibly as a public-private partnership.
- Additional land from the Norristown State Hospital.
- New uses for buildings with private partners, possibly as a bed and breakfast or restaurant.
- A living educational farm, potentially a Community Supported Agriculture (CSA) farm.
- Refurbishing of the barn wing for community use.

Pennypacker Mills
This historic site, consisting of 181 acres, was the home of Pennsylvania Governor Samuel Pennypacker. Future improvements or expansions might include:

- Acquisition of land that will connect Pennypacker Mills with the Spring Mountain Natural Area.
- A trail loop to Spring Mountain and Schwenksville.
- A connection to the Perkiomen Trail.

Peter Wentz Farmstead
This historic site, consisting of 106 acres, is a farmhouse that was General Washington’s headquarters before and after the battle of Germantown. Future improvements might include:

- A new visitor center on the prior Rothenberger property.
- A trail and foot bridge connection to the Rothenberger property.
- Picnic pavilion near parking lot for school groups.
- An improved loop trail with a connection to the county trail system and Worcester’s local trail system.
**Pottsgrove Manor**

This historic site, consisting of 2 acres, was the home of ironmaster John Potts. Future improvements might include:

- A better connection to Memorial Park.
- More appealing physical connections to the Pottstown Station for the Colebrookdale Tourist Railroad, the new carousel, and the new miniature golf course.
- Better connections to the Schuylkill River Trail and Riverfront Park.

**Spring Mill Park**

This park, consisting of 31 acres, remains relatively undeveloped, although it includes trailhead parking for the Schuylkill River Trail. Future improvements and expansions with community partnerships might include:

- Riverfront access, possibly including a boat launch.
- Public art near the trail and train station.
- Expansion towards Barren Hill Road.

**Spring Mountain Natural Area**

This area, consisting of 124 acres, is at the heart of an important natural area and contains trails. Future improvements might include:

- Loop trail up the mountain for hiking.
- Preservation of land along Schwenksville Road.
- Preservation of land off of Cedar Road around the Perkiomen Trail.
SUSTAINABLE PLACES

Sunrise Mill Historic Site
This historic site, consisting of 236 acres, contains a historic gristmill but is not open to the public. Future improvements might include:

■ Public access to the property and trail connections.
■ An extension of the property onto the former Camp Arthureeta and Camp Joy properties to extend greenway protection along Swamp Creek.
■ Operation of the mill as a public/private partnership.
■ Preservation of the historic stone arch bridge.

Upper Schuylkill Valley Park
This park, consisting of 244 acres, has river access, picnic pavilions, and a small wildlife center. Future improvements might include:

■ A connection to Royersford’s riverfront.
■ A loop trail crossing of the Schuylkill River at Route 113 into Chester County.
■ An upgraded trail connection to Lock 60 at the Schuylkill Canal Park.
■ Connections to Upper Providence’s trail system.
■ A fishing pier and canoe launch
■ Upgraded parking and improvements to the wildlife center.

Wissahickon Valley Park
This park, consisting of 149 acres, and the Fort Washington State Park provides an important link in the Wissahickon Green Ribbon Preserve. No county-initiated expansions or improvements are expected, except for a connection to the future Cross County Trail; however, the state may choose to put in new improvements on its property.
...increase the amount of preserved farmland.

In 2020, the county reached a major milestone when it surpassed 10,000 acres of preserved farmland. Although the COVID-19 pandemic prevented an in-person celebration, a video highlighting the reasons why farmland preservation matters was released by the county commissioners. According to the 2012 Census of Agriculture, the county has 596 farms on 30,780 acres, which leaves many opportunities for more farm preservation.

The county expects to continue preserving farms through the state farmland preservation program. The goal is to preserve at least 4,600 more acres on 100 more farms by 2040, for a total of 14,600 acres and 246 farms by 2040. Prime agricultural land and soils should be a priority for preservation when farms are preserved.

The county will work with partners, such as the Penn State Extension service, the Conservation District, and land conservancies, to provide technical assistance to farmers to keep their farms viable. There is a great opportunity in the county for farmers to meet the demand of the Philadelphia area market for locally produced goods, especially organic vegetables and meat products.

Local municipalities can support farming by easily allowing farm stands, encouraging compatible development in farming areas, encouraging farmers’ markets, preserving farms, and respecting the right of farmers to farm.

**FARM PRESERVATION AREAS**

4,600 more acres of farmland will be preserved by 2040
SUSTAINABLE PLACES

Modernized Infrastructure Network

Improved Stormwater Management

Conserved Natural Resources

Opportunities for Healthy Lifestyles

Diverse Housing Choices

Enhanced Community Character

PROVIDE MORE OPPORTUNITIES FOR RESIDENTS TO EXERCISE AND HAVE HEALTHY LIFESTYLES

The county’s built environment is intrinsically linked with the ability of its residents to lead healthy lives. All county residents need access to the things that keep us fit—such as healthy food and places to exercise. To that end, the county will...

...expand opportunities to walk, ride, bicycle, boat, and exercise in county parks while connecting to adjoining parks and facilities.

The demand for outdoor recreation surged in 2020 during the COVID-19 pandemic. Trail use increased and visits to parks and other natural areas became an outlet for residents looking for ways to stay healthy. The county’s parks provide opportunities for recreational activities—such as walking, running, bicycling, boating, and horseback riding. The county will:

■ Explore adding loop trails or trail extensions to county parks. Potential areas for new trail expansions include Central Perkiomen Valley Park, Green Lane Park, John James Audubon Center at Mill Grove, Lorimer Park, Lower Perkiomen Valley Park, Norristown Farm Park, Pennypacker Mills, Peter Wentz Farmstead, Spring Mountain Natural Area, and Upper Schuylkill Valley Park.

■ Add fitness stations and equipment where suitable. Fitness stations could fit almost anywhere, particularly Central Perkiomen Valley Park, Green Lane Park, Lorimer Park, Lower Perkiomen Valley Park, and Norristown Farm Park.

■ Take advantage of the unique geography of county parks when opportunities arise. Other parks present unique opportunities—an aerial ropes course, adventure course, or additional boat launches are possible additions to the county park system.

Measuring success

■ Increase in the number of park users
...advocate with local municipalities, schools, businesses, institutions, and property owners to make communities more walkable and coordinate joint recreation planning efforts.

Communities should encourage “active design” - a way to make the built environment more healthful, livable, and supportive of physical activity. For starters, municipalities can:

- Design playgrounds with ground markings to initiate games and other activities; provide lights on sidewalks and active play areas to allow for physical activity into the evenings; and encourage physical activity facilities in schools.
- Design well-connected streets with sidewalks; keep block sizes relatively small; provide pathways through existing blocks to increase walkability; minimize mid-block vehicular curb cuts; implement traffic calming measures; provide amenities such as seating, restrooms, and water fountains to increase the frequency and duration of walking.

Since this plan’s adoption, municipalities have worked to make walking and biking easier. Pottstown’s Walk Bike Pottstown initiative added crosswalks and targeted bike lanes that crisscross the borough. Joint recreation planning is also key. The Pottstown area has been planning for joint recreation needs for several years—an outgrowth of the regional planning effort there. A small financial investment shared among the eight communities in the region is beneficial to all in the long run. Other communities have joined together to plan for joint trail needs—such as Hatfield Borough and Hatfield Township. Hatboro and Upper Moreland Township partnered on a joint recreation plan. The county will help coordinate efforts like these to encourage joint recreation planning and use of facilities.

...work with food providers, farmers, health advocates, and others to increase the supply of local, fresh food.

Having easy access to affordable fresh food is an important step in keeping the county’s residents healthy. Many residents rely on convenience stores or fast food restaurants for meals, which often have a limited number of healthy options. This is a real concern with obesity and obesity-related diseases like diabetes on the rise.

Although most of the county is within close proximity to one (or more) full service grocery stores, many of the more densely populated boroughs do not have a full-service grocery store. These places should encourage grocery stores, farmers’ markets, community gardens, home gardens, and food safety net providers within their borders to provide fresh fruit and vegetable options.

The county will continue to encourage farming as a viable enterprise by preserving farms, providing technical assistance to farmers, and encouraging farmers to raise and/or grow products for local consumption. Food pantries, cupboards, and soup kitchens should partner with farms and farmers markets to provide fresh produce.

Get Out and Go Montco is a new county initiative to encourage county residents to get healthy and have fun using the county’s network of parks, trails, and open spaces.

In conjunction with DVRPC, the planning commission completed Eat Local Montco, a policy guide to assist in promoting and elevating the county’s farmers and local food producers.
SUSTAINABLE PLACES

Support Housing Choices and Opportunities to Meet the Needs of All People

Everyone must have housing, and all people want a variety of choices to meet their specific housing needs. The vast majority of housing demand is met by the private sector, but government does affect this private sector supply of housing, both by regulating housing construction and by subsidizing some housing. To improve housing choices, the county will...

...support construction of additional affordable, permanent housing around the county for the disabled, seniors, and families in cooperation with developers and non-profit housing providers

In 2013, the county’s Department of Housing and Community Development, which works with developers to determine good locations for new housing, had about $2.6 million available to support new affordable housing construction, a rental subsidy program for special needs people, and a first time homebuyers program. About $950,000 came from the federal HOME program and about $1,680,000 from the county’s Affordable Housing Trust Fund, which uses fees from the recording of deeds. The county expects these programs to continue, with a key focus being the provision of dispersed family housing.

A new emphasis will be placed on the approximately 500 people in homeless shelters or on the streets on any given day, 60% of whom are families. The county’s Your Way Home program, with its Call Center and Housing Resources Centers, will partner with philanthropic and non-profit organizations to rapidly re-house people experiencing homelessness in permanent housing or permanent supportive housing.

Ardmore Crossing in Lower Merion includes a mix of market rate and subsidized townhouses, as well as subsidized elderly apartments.

County programs help first time homebuyers.
...advocate and partner with local municipalities, developers, and community groups to provide workforce housing, additional walkable new housing, accessory apartments, and accessible special needs housing that will reflect the needs of the county’s diverse population

Many actions create housing opportunities, such as:
- Allowing accessory apartments in local zoning districts
- Building apartments, townhouses, duplexes, quadruplexes, twins, and small lot singles in walkable locations that will appeal to singles, young workers, small households, and seniors. (Of the projected demand of 38,000 new units by 2040, 24,700 of the units are expected to be apartments or attached singles.)
- Giving zoning bonuses for workforce housing
- Allowing special needs housing in all zoning districts
- Using employer assisted housing
- Streamlining the development review process
- Encouraging senior housing to be near services and walkable destinations

...encourage renovation or replacement of aging public housing units in cooperation with the county housing authority

The Montgomery County Housing Authority is an independent agency that administers the U. S. Department of Housing and Urban Development’s programs for public housing and the Housing Choice Voucher Program. The Authority owns and operates four high rise towers designed for elderly and disabled populations and four townhouse communities designed for general occupancy. MCHA has renovated and reconstructed both its Crest Manor and North Hills developments, gaining additional housing units in the process of modernizing its housing stock.

...encourage continued deconcentration of housing voucher use in cooperation with the county housing authority

Approximately 2,500 households across the county participate in the Housing Choice Voucher Program within privately-owned rental units. Federal standards provide the framework for where the vouchers will most likely be used. The Montgomery County Housing Authority will continue to encourage deconcentration of vouchers by making voucher users aware of housing opportunities around the county, encouraging private sector landlords to accept vouchers, and exploring methods of changing federal funding levels and regulations to increase the value of individual vouchers.

The county recently completed Homes For All, a report which presents recommendations to the county commissioners on ways the county can support the construction of more homes at all price points. This comes after the county’s very successful Your Way Home initiative.
ENHANCE COMMUNITY CHARACTER AND PROTECT NEIGHBORHOODS

Most of Montgomery County is now developed, and many of the county’s neighborhoods are quite old - even post war neighborhoods are now 60 years old. These places need to remain appealing places, to be true neighborhoods where residents can interact while going for a walk or visiting a park. To enhance and protect its existing neighborhoods, the county will...

...through Community Development Block Grants, other government funding, and advocacy, support investment in existing neighborhoods

The county’s neighborhoods run the gamut, from brand new subdivisions to older places needing reinvestment. The county Planning Commission will support efforts of municipalities to find additional state and federal funding for infrastructure improvements, such as the Transportation Alternatives Program, Community Conservation Partnership Program, Local Share Gaming Funds, or Act 13 Greenways Fund.

In addition, except for Abington, Conshohocken, Limerick, Lower Merion, and Norristown, which apply for money on their own, the county Department of Housing and Community Development runs the federal Community Development Block Grant program, which provides grants to eligible municipalities for community improvements. In 2013, the county had $3 million available. Moving forward, these funds will be targeted at supporting public facilities, infrastructure, public services, and economic development.

Measuring success

- Increase in residential property values
- New investment in existing neighborhoods

Investment in older communities is critical.
...advocate with local municipalities and developers for appropriate land uses, infill development, maintenance, and public improvements

As the county has become more developed and as interest in more urban or mature suburban locations has increased, infill development and redevelopment in existing neighborhoods has increased. This infill development should respect the character of existing residential communities and minimize the impact of new development on neighboring developed properties.

This can be done by:

- Adopting Traditional Neighborhood Development or Form Based Zoning.
- Incorporating standards that regulate the scale and design of infill development. These might include requirements on the footprint, height, and width of buildings; requirements for porches, roofs, windows, and doors that are similar to nearby homes; or requirements that garages be in the back of homes.
- Locating industrial, car-oriented, and heavy commercial uses away from residential neighborhoods.
- Encouraging adaptive reuse of old industrial and institutional buildings that add to the character of a community.
- Preserving historic properties and adaptively reusing these properties when they are no longer viable for their original use.
- Controlling the lighting, loading, outdoor storage, and trash areas of commercial uses and requiring buffer landscaping next to residential properties.
- Encouraging redevelopment of vacant and underutilized properties with poor maintenance into new, compatible uses.
- Installing traffic calming, sidewalks, and crosswalks to improve walkability.
- Continuing to invest in local parks.
- Recognizing exemplary developments through awards programs, like the county’s Montgomery Awards. Recent awards have gone to projects such as Bridgeport’s Zero Energy Ready Homes, Station Row at Station Square in Lower Merion, Lions Gate at Penn State Abington and the new SEPTA garage in Lansdale.
...organize and support emergency services by enhancing 911 communication, upgrading response systems, continuing strong training, and coordinating efforts

A key part of protecting communities and neighborhoods is making sure they are safe. The county, through its Department of Public Safety, operates the 9-1-1 system; coordinates public safety services among police, fire, and emergency medical responders; and provides public safety training.

A primary county goal is to upgrade the current emergency dispatch system, and the county has allocated $29.9 million for this purpose. This will involve the installation of new equipment, on both new and existing towers.

Another goal is continued cooperation for emergency responders, and the county role in coordinating multi-jurisdictional emergency responses is expected to increase.

The county began work on an update to its Hazard Mitigation Plan, which was written in 2017. This plan identifies potential natural and man-made risks and includes four focus areas:

Understanding Potential Disasters—to better understand potential disasters, the county will improve information about past disasters, improve its mapping capabilities, and develop analytical capacity to better predict disaster impacts.

Improving Public Awareness of Potential Hazards—the county will improve education programming, ensure hazard warnings are clear and timely, and engage the public in hazard training.

Reduce the Negative Impact of Hazard Events—to reduce possible loss of life, injuries, economic costs, and destruction of natural and cultural resources, the county will advocate for hazard resilient infrastructure and buildings, minimize exposure of sensitive populations and facilities to hazards, and discourage development in high hazard areas.

Minimize the Impact of Floods—the county will advocate that development be prohibited in floodplains except for redevelopment areas; encourage use of effective stormwater management techniques; encourage removal of impediments to stormwater drainage; preserve floodplains as open space; and coordinate flood hazard responses.

Measuring success

■ Reduced response times
■ Increase in shared/consolidated services of organizations

Flooding, as seen here in Conshohocken, is the county’s primary natural hazard.
...work with conservation groups, municipalities, historic preservation organizations, developers, and others to preserve important historic properties

Montgomery County owns four historic properties and, through its Assets and Infrastructure Department, will work to continue preserving historic landscapes around these properties while connecting them to the broader community with trails and sidewalks.

Local municipalities can help preserve historic properties by:
- Conducting historic resource surveys.
- Creating historic districts under the Pennsylvania Historic District Act.
- Adopting historic preservation ordinances that provide use and other bonuses for preserving historic properties.
- Adopting town center, village commercial, and traditional neighborhood design zoning ordinances that match zoning standards with the existing historic character.
- Enforcing building, fire, and safety codes in older buildings to avoid loss of historic properties through fire and neglect.
- Working with developers during the land development process to preserve historic building on properties.
- Promoting historic properties through tours and special events.

...cooperate with local municipalities, Tree Vitalize, the Department of Conservation and Natural Resources, and others to reinvigorate the tree canopy in communities

The county’s urban tree canopy can be rejuvenated by:
- Properly maintaining existing trees with guidance from local shade tree commissions.
- Focusing planting of new trees in priority areas, including riparian corridors, stormwater control areas, parks, and streets. Trees should be planted away from overhead utility lines, and existing trees near these lines should be trimmed in a way that keeps the tree viable.
- Adopting local landscaping ordinances that require replacement of trees that are removed.
- Improving the viability of trees by reducing impervious coverage, providing adequate root growth areas, and planting appropriate trees for the specific conditions.
- Conducting surveys of current tree resources.

Trees improve air quality, improve water quality, save energy, improve health, increase property values, and increase worker productivity.

Measuring success
- Increase in municipalities completing historic resource inventories
- More municipalities adopting historic preservation ordinances
- Additional properties eligible for or listed on the National Register
- Increase in municipalities adopting tree replacement, planting, and maintenance ordinances
- Increase in tree canopy over time

This historic home in Ambler has been reused as an architect’s office.
VIBRANT ECONOMY
VIBRANT ECONOMY

IMPROVE TRANSPORTATION ACCESS TO BUSINESSES

Throughout history, transportation and economic development have gone hand in hand. Businesses must have good transportation access to grow and thrive. To an extent, all transportation improvements improve access to businesses, since they make it easier for workers to commute and haulers to move freight; however, there are specific projects and policies intended to improve transportation access to employment centers or improve freight. These are highlighted in this section.

The county will ...

... work with PennDOT, the Turnpike Commission, businesses, and local municipalities to provide better access to employment centers with new and improved interchanges, slip ramps, widened and realigned roads, and new road connections

To determine need for improved access, the county will continuously monitor development trends and commuting patterns for signs of congestion and other indicators suggesting upgrades are necessary. Major projects (both recently completed and ongoing) include an extension and reconstruction of Lafayette Street in Norristown, the Ridge Pike Corridor reconstruction project (multi-municipal), and progress on furthering the King of Prussia Rail Project.

... partner with SEPTA, Transportation Management Associations, and other transit providers to expand transit options in employment centers

Often, getting transit commuters that last mile can be difficult. The county will advocate with SEPTA, transportation management associations, and businesses to support bus service, shuttle service, and vans into business centers when ridership warrants this service. In addition, the county will explore ways to extend more public transportation into employment centers.

The Conshohockens grew after the completion of Route 476. Their train access has been an additional boon, allowing companies to attract young workers living in Philadelphia.

Measuring success

- New and expanded Turnpike interchanges
- Widened, realigned, and new roads leading into employment centers
- Total new real estate investment around new road improvements
- Percent of commuters using transit, carpools, cycling, walking, telecommuting, and other commuting alternatives
- Increase in commuters using public transit to access county employment centers
- New investment around train stations
Proposed freight improvement include:

- Pa 309 Connector (Number 83)
- Upper Perkiomen Truck Bypass Route (Number 42)
- Keystone Boulevard Extension (Number 35)

A priority for public transportation is to extend the Norristown High Speed Line to the King of Prussia employment center. (Number 99)

Road projects intended to improve access to employment centers and businesses include:

- New or expanded highway interchanges. (Numbers 01, 05, 07, 08, 09, 10, 11, 37, and 82) In particular, new Turnpike slip ramp interchanges are a county priority.
- Ridge Pike in Plymouth Township will be widened to 5 lanes to provide better access to the car dealers and businesses. (Number 89)
VIBRANT ECONOMY

... support efforts by the Delaware Valley Regional Planning Commission, businesses, and freight companies to improve freight movement in the county

Freight is a critical part of the county’s economy for deliveries to industries and stores and for movement of finished industrial goods to consumers.

Trucks are expected to continue being the primary freight option in the county.

- The county will encourage accident and incident alerting systems, Intelligent Transportation Systems, traffic management systems, and geographic information systems to maximize the efficiency of freight movement.
- As highways are upgraded, they will need to be designed for freight and truck movement.
- New truck generating facilities should be near highway interchanges and away from residential neighborhoods.
- Highway upgrades near residences should include sound barriers to ameliorate the sound of trucks.
- The county will continue to monitor changes in supply chains to determine if new investment is needed.
- Public-private partnerships may be needed to fund improvements to freight centers and facilities.

The county also has an extensive freight rail system that will need to be well maintained. Sound barriers, quiet zones, and separated grade road crossings should be used to minimize the impact of train traffic on nearby communities. Inspection and maintenance of freight lines is important, and train derailments should be managed in accordance with the county Hazard Mitigation and Emergency Operations plans.

Measuring success

- Increase in tonnage moved by trucks
- Increase in tonnage moved by freight rail
- Real estate investment and redevelopment around new freight facilities

When possible, industrial development should not be next to residences. When it is and when there is enough room, buffers should be 50 feet wide and should include a berm and intense landscaping.
... advocate for preservation of existing airports that provide commuter and freight services to businesses

The county’s airports currently provide services to the county’s businesses, including opportunities for direct flights near corporate offices and direct delivery of goods by air. They also provide jobs and generate economic activity.

In the future, these airports could play a more critical role in the local economy. The county encourages airports to remain to meet existing demand and potential future need. In addition, local municipalities should adopt current airport hazard area zoning standards.

COUNTY AIRPORTS

<table>
<thead>
<tr>
<th>AIRPORTS</th>

ENCOURAGE DEVELOPMENT AND TRANSFORMATIVE INVESTMENT WHERE INFRASTRUCTURE ALREADY EXISTS

The county has an extensive and robust infrastructure network that can support new development. To encourage investment where this infrastructure already exists, the county will...

... advocate with municipalities, developers, schools, institutions, and businesses to locate new development in proposed growth areas

Much of the county is already developed and has the infrastructure in place to support this development, including sewers, water, roads, and stormwater control. Focusing new development on vacant and underutilized land in these developed areas will save capital and operating infrastructure costs, lower construction costs for new development, and shorten commuting times for workers.

The Future Land Use Map shown in the final Vision chapter has a number of mixed use and residential land use categories that constitute designated growth areas for the county. Future development should occur in appropriate locations within these designated growth areas, primarily in mixed use areas, although undeveloped land in residential areas is generally appropriate for new residential growth.

GENERALIZED FUTURE LAND USE
... work collaboratively with local municipalities, developers, the state Department of Environmental Protection, and the state Department of Community and Economic Development to encourage redevelopment of underutilized and vacant industrial land

Most of the industrial land in the county should stay industrial, even when it redevelops. Although industrial development has been limited lately, there are important trends pointing towards renewed interest in industrial construction, including reshoring of manufacturing from overseas, lower energy costs because of natural gas production, and new distribution centers focused on moving retail goods quickly to markets. The county encourages and supports this industrial growth.

Some industrial properties - such as older ones in residential areas, properties not meeting current access and size requirements, and land near passenger rail stations - might be appropriate for new uses, such as mixed use buildings, apartments, and offices. Some of these are brownfield sites that may have contamination or the perception of contamination. Reuse of these areas can take advantage of the brownfield assessment process, federal and state incentives and subsidies, changes in zoning regulations, investments in infrastructure, and land assemblage. New development should fit into the character of nearby residential neighborhoods and should preserve primary and secondary greenways going through the property.

... work with municipalities, developers, and businesses on modernizing and adapting older office and business parks in the county through zoning changes, infrastructure improvements, marketing, and private sector investment

Many of the county’s business parks and campuses are getting older and would benefit from new investment and renovations. To create a more diverse working environment and to appeal to younger workers, municipalities may want to change their zoning, allowing office campuses to become more mixed use, with restaurants, retail shops, service businesses, entertainment facilities, health clubs, day care centers, and apartments.

The county will encourage infrastructure improvements, particularly better transportation access, for these employment centers.

Most industrial land in the county should continue to be used for industrial purposes

The old Unisys campus has been transformed into a modern, amenity-rich office complex through private sector investment

Measuring success

- More brownfield sites redeveloped
- Decrease in Superfund sites in the county
- Increase in federal and state funding for brownfields remediation
- New municipal ordinances allowing alternative uses on industrial properties in residential areas, with obsolete conditions, and near train stations

Measuring success

- New office and industrial jobs in the county
- Increase in real estate investment in offices
- Increase in real estate investment in industrial buildings
ATTRACT AND RETAIN BUSINESSES AND VITAL COMMUNITY ASSETS

Montgomery County has a strong, diverse economy and wants to keep this economy growing to provide well-paying jobs to its residents and a strong tax base for infrastructure improvements. To attract and retain businesses, the county will ...

... partner with the Greater Philadelphia Chamber of Commerce, Select Greater Philadelphia, the Greater Philadelphia World Trade Center, local chambers, the PA Department of Community and Economic Development, the Ben Franklin Technology Partners, the Economy League, and others to assist businesses that want to expand or locate in the county

The Greater Philadelphia Region, which stretches from Wilmington to Trenton, has an excellent location between New York and Washington DC; a lower cost of living than other parts of the Northeast; a low cost of doing business and relatively low Class A office space rents; a highly educated workforce; and a high quality of life, including superb schools, great healthcare, and wonderful activities.

Working within the regional framework, the county will provide guidance and assistance advocating for transportation and other improvements for businesses that want to expand or locate here while working to attract and retain skilled workers.

Key Sectors for Greater Philadelphia

- Life Sciences
- Advanced Manufacturing
- Information Technology and Communications
- Financial and Professional Services
- Logistics
- Energy
- Higher Education
- Healthcare

The Montgomery County Development Corporation, part of the one stop shop at the county Commerce Department, and the Ben Franklin Technology Partners of Southeastern Pennsylvania will jointly run PA Life Sciences Connect, a new program to support business ventures and jobs in Southeast Pennsylvania’s critical life sciences sector.
... through its Workforce Investment Board, collaborate with the Montgomery County Community College, other colleges, the county’s four technical high schools, and other trainers and educators to retrain and support a skilled workforce

The county will implement the following strategies to address current labor market needs:

- Identifying and bridging skills gaps in the workforce
- Developing employer driven partnerships
- Developing and expanding career pathways
- Using the most effective job matching services in its PA CareerLink system

Workforce Investment Board Implementation

- Market the state’s Keystone Works program for dislocated workers to interested businesses.
- Develop short term pre-employment training as an intensive service.
- Cooperate with the County Assistance Office to provide assessment, job development, case management, and GED preparation for those moving from welfare to work.
- Use the Mobile Outreach Skills Training program for manufacturers to address their talent needs.
- Emphasize the career potential of high priority occupations. Incorporate an Employer Connection series of employer panels into the service delivery system.
- Use WorkKeys assessments in the PA CareerLink program to identify “real world” skills needed for specific job success.

The county’s many colleges, universities, and high schools are critical providers of workforce training.

Measuring success

- Percent of dislocated workers entering employment increases
- Increase of trainees placed into careers
FLEXIBLY ADAPT TO CHANGING MARKET CONDITIONS AND DEMOGRAPHICS

Important shifts are happening in the county’s population and real estate market, and the county must be prepared for these changing conditions. On the demographic front, the county’s population is aging and foreign-born residents are increasing, while many young residents express interest in more urban locations. In real estate, mixed use is more popular, offices are being reimagined, apartment development is growing, industrial may be coming back, and retail is changing.

The county will stay on top of these trends, adjusting its work and outreach to continuously address changing demographic and real estate trends. Specifically, the county will ...

... encourage communities, businesses, arts organizations, and developers to create walkable, mixed use, transit-friendly, and entertainment-supportive employment centers, towns, and destinations to attract young workers and other key demographic groups

Younger generations tend to have more formal education than older ones, and many businesses find that their young, creative workers want to live in more urban locations.

Measuring success

- Increase in young adults moving into the county

40% of Millennials prefer cities, compared to 28% of all adults - The county will continue to encourage town revitalization and new mixed use development to meet this demand

62% of Millennials want to be close to a mix of shops, restaurants, and offices, compared to 53% of all adults - The county will work with municipalities on zoning that allows well-designed mixed use development

55% of Millennials want public transportation options, compared to 51% of all adults - The county will work with SEPTA to improve public transit convenience and access

76% of Millennials rate walkability as important, compared to 70% of all adults - The county will prepare a walkability plan and will encourage good pedestrian design
Montco 2040: a shared vision

... advocate with local municipalities, health care providers, and developers to create an environment that meets the needs of an aging population

As the Baby Boom generation ages, the county’s older population will increase significantly, approximately 58% by 2040. The county, through its Office of Aging and Adult Services and Planning Commission, will advocate for the unique needs of these residents.

Livable places meeting the needs of older citizens have:
- Safe, easily accessible parks and public areas with sufficient outdoor seating, trails, and restrooms
- Buildings that are well signed and easy to enter or drop someone off
- Accessible sidewalks and crosswalks in walkable neighborhoods
- Public transportation options
- Continuing education at colleges and other venues
- Religious institutions, libraries, senior centers, and other supportive institutions for older citizens
- Roads and signage with straightforward markings, drop off areas, and signage
- All types of housing in areas that are close to services and the rest of the community
- Assisted living and nursing homes within the community
- Homes designed for accessibility and aging in place
- Venues for events and activities in well lit, convenient locations

... work with local municipalities, developers, and property owners redeveloping older retail properties

With so many shopping centers in the county, many older centers and properties may be ready for redevelopment. The county will prepare a guide for redeveloping and improving retail commercial areas.

Some retail areas can convert to different uses such as:
- mixed use areas and town centers
- offices, including health care facilities
- recreational centers and gyms
- apartments
- twins, townhouses, quadruplexes, duplexes, and other medium density housing

Whether they remain retail or not, existing retail properties should have:
- combined driveways and interconnected parking
- buildings close to the street with front doors and windows facing the street
- sidewalks set back from the street that connect to the building
- street trees, landscaping, walls to screen parking, and other street beautification
- appropriate signage
FACILITATE MARKETING OF THE COUNTY AND ITS ASSETS

Montgomery County has incredible resources and assets that make it a prime location for businesses, residents, visitors, and institutions. To make more people and organizations aware of these tremendous assets, the county will ...

...partner with the Valley Forge Tourism and Convention Board, Visit Philadelphia, and tourist sites to attract visitors and increase county-wide tourism

The county’s official tourism promotional agency will use its iconic and nationally recognized “Valley Forge” identity to distinguish itself and use the county’s great history to welcome visitors from all over and to drive business into county hotels, attractions, retail shops, restaurants, and more. The agency will have a local campaign and pride building outreach effort, “MakeitMontco,” to inspire locals to become tourists in their own backyards. This promotional campaign will market the county’s many wide-open spaces, unique places, adventurous activities, trails, and historic attractions.

Signage and wayfinding systems will also be used to help visitors get to their destinations.

Measuring success

- Percent of hotel rooms occupied
- Increased tourism spending in the county
- Additional employees in tourism-related businesses
Montgomery County is a great place for business in the Philadelphia region. Its many assets include:

- Extensive interconnected highway network and public transportation
- Diverse economy that leads the state in high tech and manufacturing jobs
- A well-educated workforce, leading the Philadelphia region in percentage of residents with graduate or professional degrees
- Effective governments, schools, colleges, and utilities that can meet the needs of businesses
- Relatively low taxes for the services provided

... increase awareness in the business community of county economic development resources

In 2014, the county completed its transition to a one-stop shop for economic development—the Commerce Department. The Redevelopment Authority, Industrial Development Authority, and Economic Development Corporation are now part of this department. The COVID-19 pandemic heightened the need for business support, with financial assistance programs put in place for small business owners, restaurants, and others. The county’s Restart Montco initiative aimed to get resources into the hands of municipalities that needed to restructure the way that people socialized, shopped, and exercised in our downtowns and other spaces:

- More new businesses choosing the county
- Increase in net importation of workers

Measuring success

BUSINESS SOLUTIONS – loan programs, employee recruitment services, and site location assistance

REDEVELOPMENT AREAS – redevelopment planning, brownfields, tax increment financing, affordable housing support, and enterprise zone administration

JOBS AND TRAINING – on the job training, customized job training, and CareerLink

YOUTH PROGRAMS – job readiness, life skills, summer internships, and GED and employability classes

... partner with the Greater Philadelphia Chamber of Commerce, local chambers, the community college, and other economic development agencies to emphasize the assets of Montgomery County
2040 VISION
LAND USE VISION

Over the next 25 years, the land use pattern in the county will evolve, reflecting market trends, consumer demand, and government policy. In 2040, the county’s future land use will include:

- Attractive, prosperous, and accessible residential neighborhoods designed for neighborly interaction.
- Traditional rural landscapes with preserved farms, wooded valleys, and country homes.
- Modern, walkable, green, connected, and mixed use commercial and community cores.
- Vibrant downtowns and village centers.
- New high tech, life sciences, professional, financial service, and advanced manufacturing development in research centers, business parks, and mixed use cores.
- Interconnected greenways, trails, and parks.

Office areas, commercial strips, mixed use areas, downtown edges, land near train stations, and retail centers may see new walkable, mixed use development.

The county’s residential neighborhoods should remain relatively unchanged in the future.
The county will remain an economic powerhouse and is expected to continue leading the state in high tech and manufacturing employment.

Downtown and village areas will remain community focal points with lively streets, strong businesses, and popular entertainment and restaurant destinations.

Development should be limited in rural areas, with more farmland permanently preserved.
2040 VISION

Growth and Rural Resource Areas

In accordance with the state enabling legislation, the county can be divided into broad land use categories that reflect the desired character, level of development, and access to utilities. These three broad categories are Growth Areas, Rural Resource Areas, and Open Space Preservation Areas.

- **Growth Areas** - these areas are the most logical parts of the county for new development. Virtually all new non-residential development should be in Growth Areas, as well as 95% of new homes. Generally, residential development should be at densities greater than one home per acre, and all development should be served by public sewers and water.

  *Developed Land in Growth Areas* - These properties are already developed with homes, businesses, and institutions. Some Developed Land properties, such as a vacant shopping center, old office building, or underutilized industrial site, will redevelop and intensify. In addition, infill development may occur in many different locations.

  *Developable Land in Growth Areas* - Developable Land properties are currently farmed, vacant, or open. These properties may see future development, and much of the new development in the county is expected to go on these properties.

- **Rural Resource Areas** - these rural areas should have very limited new development. No more than 5% of the county’s new residential development should be located in Rural Resource Areas. Generally, these areas should not be served by public sewers or public water, except for special cases involving failing on-lot sewer systems, residential cluster developments, or water supply issues.

  *Developed Land and Preserved Farmland in Rural Resource Areas* - These areas are either developed with low-intensity residential, business, and institutional uses or are permanently preserved as farms. Very little additional development is expected on these properties.

  *Developable Land in Rural Resource Areas* - These properties, which might be unpreserved farms or wooded properties, should remain undeveloped, although the little development that does occur in the Rural Resource Areas will most likely be on these properties.

- **Open Space Preservation Areas** - these natural areas and parks should be minimally developed, with an emphasis on environmental protection, greenway preservation, and outdoor recreation.

  *Existing Preserved Open Space* - These areas are existing federal, state, county, and local parks or properties protected through a conservation easement. Except for park improvements, no new development should occur.

  *Conservation Opportunity Areas* - These environmentally-sensitive areas and greenways should have minimal development, if any.
Future Land Use

The county’s future land use is divided into land use categories that reflect the intended character, function, and intensity of an area.

Regional Mixed Use Center – Regional Mixed Use Centers are intensely developed suburban cores with significant retail, office, and residential land uses. Regional Mixed Use Centers generate a lot of traffic, a lot of jobs, and a lot of overall activity. The primary uses in these areas might include:

- Malls, regional and major community shopping centers, and large department stores.
- Large office complexes, office buildings, and light industrial areas.
- Hotels and conference facilities.
- High-density multifamily and townhomes.
- Entertainment uses and concentrations of restaurants

Secondary uses might include small-scale shopping centers and retail stores, small offices, institutions, civic uses, day care centers, and other residential housing types.

When feasible, land uses should be mixed within Regional Mixed Use Centers. Over time, these centers should establish more of a sense of place, ideally with a clearly defined public gathering place. New development or redevelopment of sites should be designed to accommodate significant automobile trips, and Regional Mixed Use Center should have internal road systems that allow traffic movement in and around the center outside of the regional road network.

Developments and public improvements should make it easy to walk to public transportation and other parts of the center. Over time, the character of development might evolve, with higher buildings, diverse uses, and structured parking.

Uses can be mixed within buildings, including ground floor retail, restaurants, and services below offices. Retail shopping areas are a major component of Regional Mixed Use Centers. New buildings located close to streets help create a walkable environment.
Community Mixed Use and Services – Community Mixed Use and Service Areas are local community focal points that typically have a significant retail or institutional element with surrounding residential uses. These centers are located on major roads within the community and usually have a suburban character.

The primary uses in these areas might include:
- Community and neighborhood shopping centers and retail uses in concentrated nodes
- Professional offices, business offices, and other small-scale offices.
- Major institutions and other local services, such as day care centers.
- Higher density residential uses that act as a transition from non-residential areas to residential areas.

Secondary uses might include light industrial, entertainment uses, and medium density residential.

Where feasible within Community Mixed Use and Service areas, interconnected mixed use developments that provide a transition from major roads, bus stops, and commercial areas should be encouraged.

Developments should share driveways, have interconnected parking lots, be designed for walking, be compatible with residential areas, have extensive buffering and residentially-scaled buildings next to residential areas, and be compatible with abutting village areas.
**Business Areas** – Business Areas are concentrations of employment-oriented land uses, such as offices, research facilities, and industrial parks. Most office-oriented Business Areas are located near highway interchanges while industrial-oriented ones tend to have a wider range of locations, reflecting older transportation networks based on train lines. Business Areas often generate a lot of general traffic during peak times and freight traffic throughout the day.

The primary uses in these areas might include:
- Large offices or concentrations of offices.
- Research and development facilities
- Large industrial, manufacturing, and warehouse uses or concentrations of these uses.

Secondary uses might include small-scale retail and service businesses, higher-density residential uses that are buffered from other uses or on the periphery of the area, institutions, and day care centers.

Over time, Business Areas should have more supporting land uses, including retail, service, and day care. Residential uses in Business Areas should not be placed next to industrial uses that will create nuisances for the residents. In addition, development should be designed to accommodate significant automobile and truck trips, make it easy for employees to walk to public transportation, and control the impact of potential noise, light, and pollution on nearby residences.
**Town Center** – Town Centers are traditional downtown areas with a mix of retail, institutional, office, and residential uses. These centers are pedestrian-oriented, with buildings built close to sidewalks and often attached, side to side.

The primary uses in these areas might include:
- Traditional downtown retail and mixed use buildings
- Traditional downtown offices, residences, and institutions
- Entertainment uses
- High-density residential development next to traditional downtown areas

Secondary uses in these areas might include existing industrial uses and day care centers.

Land uses should be mixed within town centers, preferably within individual buildings. Historic buildings should be preserved, rehabilitated, and reused. New development must respect pedestrians with appropriate design that encourages walking. Development should be built to the sidewalk or close to the sidewalk, with doors that open to the sidewalk and clear windows along the street.

Buildings should be designed with a wall to window ratio that reflects existing historic structures in the area and should generally have a vertical orientation. Parking should be located to the rear of buildings. When structured parking is used and faces a primary pedestrian route, stores and other uses should be placed in the ground floor of the building. Public access to rivers and other waterways should be preserved, and, if one does not already exist, a central park or green should be created.
Village Center – Village Centers are traditional village areas with a mix of retail, institutional, office, and residential uses. Unlike denser town centers, these centers usually have small separate buildings located close to each other, with people walking and driving from use to use. Most older buildings began as residences, although many have been converted to other uses.

The primary uses in these areas might include:

- Traditional village retail and mixed use buildings
- Traditional village offices, residences, and institutions
- Residential development next to the village

Secondary uses in these areas might include existing industrial uses scattered around the village area and day care centers. Whenever feasible, land uses should be mixed within village centers. Historic buildings should be preserved, rehabilitated, and reused, with additions made to the rear of the building. New development must respect the historic character of the village, which is often based on older residential development. In addition, new development or redevelopment of sites should have a small-scale.

Parking should be located to the rear of buildings. Parking lots should be interconnected and abutting uses should share common driveways, whenever feasible. Landscaping, fencing, porches, and raised yards should be used in the front of buildings.

Historic village buildings can be reimagined with new uses.

Residential areas are often part of Village Centers.

Parking should be to the side or rear of village buildings.
Town Residential Area – Town Residential Areas are traditional residential areas that are oriented towards pedestrians more than automobiles. These areas have a variety of housing types that are often mingled within blocks or small neighborhoods. The primary uses in these areas might include:

- Multifamily, townhouses, twins, and small lot single-family detached homes
- Institutions

Secondary uses might include limited supporting retail and office uses.

Residential development should match the character and type of housing found in the immediate neighborhood. Historic and other older buildings should be preserved, rehabilitated, and reused.

New homes should be built to an established front yard setback along the street. Roof lines, window locations and patterns, building mass, building form, and building height should reflect existing designs found in the neighborhood. Buildings should be small in scale. Parking should be located to the rear of buildings, with access through alleys or driveways on the side of properties. Non-residential buildings should be designed for use by pedestrians, with front doors, parking behind buildings, and pedestrian-scaled facades. These uses must also be designed to limit potential impacts of traffic, noise, and light.
Suburban Residential Area – Suburban Residential Areas are residential areas which depend on automobiles for transportation and often have extensive landscaping on individual properties. These areas will have a variety of housing types, with single-family detached homes the most prominent type.

Denser and more compact development should occur in Suburban Residential Areas that are next to centers with significant non-residential development or near train stations. Less dense development should occur near Rural Resource Areas and near environmentally-sensitive land.

The primary uses in these areas might include:
- Single-family detached homes
- Less dense multifamily and single-family attached uses
- Institutional uses

Secondary uses might include limited small-scale supporting retail and office uses as a transition to busy roads or other uses.

Residential development should match the character and type of housing found in the immediate neighborhood. Trees, steep slopes, wetlands, and other sensitive land should be preserved, potentially as open space within a cluster development. Appropriate landscaping, buffers, and street trees should be provided by all developments. Recreation facilities and central open space should be provided.

Non-residential buildings should have a residential character, with pitched roofs, small building footprints, residential building materials, and residentially-scaled windows and doors. These uses must also be designed to limit potential impacts of traffic, noise, and light.

Institutional uses in residential areas must fit into the local neighborhood with significant landscaping and sustainable designs.

New suburban homes should be designed as walkable developments.

Cluster developments preserve important open space, such as natural features, views, and historic landmarks.
Rural Resource Area – Rural Resource Areas consist of open land with a traditional rural appearance that includes farms, small woodlands, some low density residential homes, and rural villages.

The primary uses in these areas might include:
- Farmland and other undeveloped land.
- Scattered single-family detached homes
- Low density residential development that is clustered or has a rural character
- Low intensity institutional uses
- Rural villages

Secondary uses might include existing rural industrial enterprises.

Rural Resource Areas should be as open and undeveloped as possible, with little, if any new development. Historic buildings and structures should be preserved or reused, including homes, barns, outbuildings, fences, walls, and bridges.

New development should fit in with the overall rural character, and homes should be hidden from view, either through topography or landscaping. Farmfields, trees, steep slopes, wetlands, and other environmentally sensitive land should be preserved, potentially as open space within a cluster development. New buildings in rural villages should meet the design guidelines for Village Centers.
**Conservation Area** – Conservation Areas primarily consist of parks, environmentally-sensitive land, and connecting land, with little, if any, existing development.

The primary uses in these areas might include:
- Federal, state, county, and municipal parks.
- Privately-owned land that is permanently preserved as open space.
- Concentrations of environmentally-sensitive land, including stream corridors and wooded highlands.
- Undeveloped land that connects parks or environmentally-sensitive land.

Secondary uses might include existing homes, institutions, and other buildings, with very limited new development around these existing developed islands in the future.

New development should only occur in the following situations:
- Development of brownfield and old industrial sites in elevated and flood-proofed buildings located along streams or rivers.
  These sites should be in redevelopment areas encouraging economic revitalization, and open space and public access should be maintained along the river or stream.
- Creation of park and recreation facilities for the public.
- Limited expansion of existing development on privately owned land.
- Residential cluster development that preserves open space corridors, greenways, viewsheds, and critical environmentally-sensitive land.

Even heavily developed boroughs can have natural open space areas.

Nonprofit organizations are important partners for preserving open space.

The county’s greenways and conservation landscapes are focus areas for preservation.
2040 VISION

**Rail Station Walk Shed** – This category shows a half mile radius around the county’s passenger rail stations where residents and commuters can easily walk to the station. These areas are typically developed but have extensive opportunities for redevelopment that is more oriented towards train stations.

Redevelopment in these areas might include:
- Mixed use buildings
- Offices
- Higher-density multifamily and townhouse development

Secondary uses might include small-scale retail, service businesses, and institutions.

The Rail Station Walk Shed land use category is shown as an overlay of other land uses, and any new development should be consistent with the standards of these underlying land uses.

New development within Rail Station Walk Sheds should be more intense than other development to support pedestrian traffic to and from the train station. Buildings should be multi-story, close to the sidewalk, and designed for pedestrians. Parking for cars should be deemphasized by locating parking to the rear of buildings, putting retail and other uses in the ground floor of parking garages, or screening parking garages with buildings. Streetscaping, street trees, and road diets should be used to make walking as easy as possible.

Existing viable residential neighborhoods, commercial areas, parks, and natural areas should generally remain as they currently are.

Station Square is a suburban mixed use development next to the Pennbrook Station in Lansdale.

This apartment complex in Spring Mill is designed to appeal to residents who want easy access to the train. It also includes a parking garage partially wrapped by the apartment building.

This mixed use building has offices above retail stores and restaurants. It is next to the Ardmore train station.
Unique County-Wide Uses – This category includes unique existing infrastructure, institutional, and utility uses that serve a large area and are needed by the community as a whole. These uses can create noise, vibration, odor, and visual impacts, or, alternately, can create negative perceptions of an area. Nevertheless, these uses generally meet a county-wide need.

These areas will typically include one of the following primary uses:
- Airports
- Quarries
- Power plants and large substations
- Landfills and large junkyards
- Prisons

Unique County-Wide uses may change or discontinue. To address this potential situation, the future land use map shows an underlying land use category for all Unique County-Wide uses. This underlying category should be used if a unique county-wide use discontinues, with the understanding that there could be contamination or other continuing issues with the land that must be accounted for during redevelopment. Whenever properties redevelop, important environmental features should be preserved.

The county is adequately served by its existing Unique County-Wide land uses and does not envision new locations for these facilities, except perhaps for smaller peak load or other specialized power generating facilities. However, existing facilities may expand at their current location but must do so in a manner that reduces potential visual and nuisance impacts.

When expansions occur, buildings and intrusive outside activity should be set back a significant distance from residential areas. Buffers, landscaping, and existing environmental features should be used to screen the property from abutting properties. Buildings should be sited in a manner that minimizes their potential intrusiveness on the neighborhood. Trucks routes into the property should use major roads and avoid residential areas. All uses and expansion of uses must meet environmental laws and local noise, vibration, light, and pollution performance standards.
TRANSPORTATION VISION

Over the next 25 years, the transportation network will expand, reflecting investment in road improvements, public transit, trails, and sidewalks. In 2040, the county’s transportation network will include:

- New road choices and improved road conditions.
- Bridges and roads that are in a good state of repair.
- Improved public transit access, service, and frequency.
- An extensive county trail system that is connected with local municipal trails and regional trails.
- Improved bikeability of roads and bicycle facilities.
- An expanded sidewalk and pedestrian network designed to make walking easy, comfortable, and safe.
- Increased use of travel demand management strategies.

Both public transit and roads should be more convenient and less time consuming to use. Walking should be easier and safer.
Transportation Projects

Major transportation projects are divided into three categories - programmed roadway projects, vision roadway projects, and vision transit projects.

Programmed Roadway Projects - These are high priority projects with dedicated construction funding for either a portion of the project or the entire project. Programmed Roadway Projects include highway reconstruction and widening, intersection realignments and upgrades, and bridge replacement. Programmed projects are based on two sources:

- Transportation Improvement Program (TIP). The TIP is the regionally agreed upon list of priority transportation projects. The TIP, which covers a 12-year time frame, must list all projects that intend to use federal funds, along with all non-federally funded projects that are regionally significant. (The TIP also includes smaller scale projects, such as bridge reconstructions and streetscaping, that are not listed in Montco 2040).

- The Delaware Valley Regional Planning Commission (DVRPC) Long Range Plan. Also known as Connections 2040 Plan for Greater Philadelphia, this is the long-range plan for the future growth and development of the greater DVRPC region and puts forth a vision for investing in our transportation system. Projects listed in this plan are expected to be funded after the 12-year time frame for the TIP projects.
## PROGRAMMED ROADWAY PROJECTS—(TIP 12 YEAR AND DVRPC LONG RANGE PLAN)

</table>
Vision Roadway Projects - These projects are high priority projects that do not currently have dedicated funding. These are similar to those that have programmed funding and are important both locally and regionally. As additional funding becomes available, these projects should be a priority for receiving funds. The Turnpike Interchange projects, in particular, are a priority for moving from the list of Vision Roadway Projects to the list of Programmed Roadway Projects.

Future roadway projects should have context sensitive design that fits into the character of the community. They should also include sidewalks, bike lanes, and other bicycle and pedestrian infrastructure, when appropriate.

The Lafayette Street extension in Norristown and Plymouth leads to a project listed as a Vision Roadway Project, the Lafayette/Ridge interchange of I-276, the Pennsylvania Turnpike.

Many of the county’s traffic bottlenecks are local intersections, like this one at North Wales Road and Skippack Pike, that need additional turning lanes and signal improvements.

New projects should be designed to sensitively fit into the local context while providing pedestrian and bicycling alternatives.

**2040 VISION**

**Programmed and Vision Transit Projects** - These include a mix of funded and unfunded projects. Many of the SEPTA projects are from the agency’s “Catching Up” capital program, which is focused on upgrading the existing system. Service extensions include extending the Norristown High Speed line to King of Prussia, restoring passenger rail service along the Quakertown line from Lansdale to Pennridge, and extending regional rail from Norristown to Reading (Berks County) via Pottstown. More frequent service should be provided wherever feasible to broaden use and make service more convenient. There is also broad-based interest in adding parking structures and capacity at regional rail stations at Noble, Ardmore, Lansdale, and Conshohocken.

OVERALL VISION

Over the next 25 years, the county will see a variety of improvements that will connect communities, sustain places, support a vibrant economy, and implement land use and transportation visions. County priorities are listed below.

Connected Communities

By 2040, the county will take a number of steps to connect communities:

- Encouraging more collaboration and partnerships - the county will participate actively in local and regional organizations while encouraging municipalities to work together and expand multi-municipal planning.

- Improving transportation quality and options - priorities include improving the current road system, adding new Turnpike interchanges; improving the frequency of service on the Norristown, Warminster, and West Trenton lines; extending the Norristown High Speed Line to King of Prussia; and making communities more walkable.

- Expanding county trails and greenways - expanding the county trail system is a priority, beginning with completion of the Schuylkill Valley, Chester Valley, Pennypack, Wissahiccon, and Cross County trails.

- Supporting strong downtowns and community destinations - making the county’s downtown areas appealing destinations for local residents, visitors, and skilled high tech and creative workers is very important.

Strong partnerships are critical for making Montco 2040: A Shared Vision a reality.
Sustainable Places

By 2040, the county will take a number of steps to sustain places:

■ Supporting a modernized infrastructure network - improving county roads and bridges and advocating for other infrastructure providers to modernize their systems are priorities.

■ Improving stormwater management - implementing the county’s MS4 permit requirements and completing the required ACT 167 stormwater management plans are priorities.

■ Conserving natural resources - improving county parks, protecting conservation areas, and continuing the farmland preservation program are extremely important.

■ Providing opportunities for healthy lifestyles - adding loop trails and fitness stations to county parks and advocating for county residents to exercise and have fun are priorities.

■ Supporting diverse housing choices - supporting new affordable housing developments, providing housing for the disabled, and helping homeless residents are critically important priorities.

■ Enhancing community character - supporting neighborhood improvements and updating the county’s emergency dispatch system are county priorities.

Sustainable practices will keep the county a great place to live and work.
Vibrant Economy
By 2040, the county will take a number of steps to support a vibrant economy:

■ Improving transportation access to businesses - reducing congestion while adding new interchanges and other road access to businesses, as well as public transit access, are priorities.

■ Encouraging focused development - encouraging new development in the county’s many business parks, office campuses, and industrial areas is a county priority.

■ Attracting and retaining businesses - partnering with regional and state economic development agencies to expand the county’s economy while training the workforce to meet current industry needs are priorities.

■ Flexibly adapting to market conditions - attracting millennials and high tech, creative workers is a priority.

■ Facilitate marketing of the county - making regional and national visitors and businesses aware of the county’s many assets is important.

Having a vibrant economy with good jobs is critically important.
**Land Use and Transportation Visions**

By 2040, the county will take a number of steps to support the land use and transportation visions:

- **Advocating for land use** - although much of the county will remain relatively unchanged by 2040, other areas may see significant changes. Important land use considerations include:
  - Creating more walkable development around train stations
  - Encouraging mixed use development in regional mixed use business centers
  - Reinventing business and office parks
  - Increasing the vibrancy of downtowns
  - Limiting development in rural areas
  - Diversifying retail commercial areas
  - Providing a range of housing options
  - Protecting existing neighborhoods, important historic properties, and vulnerable natural resources

- **Improving transportation** - completing existing road and transit projects while finding ways to fund additional projects are priorities for the county. Creating a more walkable landscape is also critically important.

In 2040, the county will be interconnected, sustainable, and vibrant.

</tbody>
</table>
Floodplain  | An area of land adjacent to a stream or river that experiences flooding during periods of high discharge. It includes the floodway, which consists of the stream channel and adjacent areas that actively carry flood flows downstream, and the flood fringe, which are areas inundated by the flood, but which do not experience a strong current.

Form Based Zoning  | A zoning code which fosters predictable built results and a high-quality public realm by using physical form (rather than separation of uses) as the organizing principle for the code.

General Acute Care Hospital  | An institution, whether operated for profit or not, which maintains and operates facilities for the diagnosis, treatment or care of two or more non-related individuals suffering from illness, injury or deformity and where emergency, out-patient, surgical, obstetrical, convalescent or other medical and nursing care is rendered for periods exceeding 24 hours.

High Occupancy Vehicle Lane  | Also known as an HOV lane, a restricted traffic lane reserved at peak travel times or longer for the exclusive use of vehicles with a driver and one or more passengers (including carpools, vanpools, and transit buses), with the goals of reducing congestion and air pollution.

Historical Architectural Review Board (HARB)  | A public advisory body created by state and local laws. HARBS operate under the authority of the State of Pennsylvania’s Historic District Act, General Assembly #167 of 1961, as amended 1963.

Household  | A household includes all the people who occupy a housing unit. A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or if vacant, is intended for occupancy) as separate living quarters. The occupants may be a single family, one person living alone, two or more families living together, or

Housing Choice Voucher Program (formerly Section 8)  | A federal program for assisting very low-income families, the elderly, and the disabled to afford decent, safe, and sanitary housing in the private market which is administered on a local level by public housing agencies.

Independent Living Facilities  | Communities where units are restricted to households where at least one member is at least age 55; residents live independently without nursing care.

Industrial  | Lands with heavy industrial uses, such as oil refineries, chemical plants, steel and metal fabrication facilities, and manufacturing facilities - as well as lighter industrial uses, warehousing and distribution centers, mini-storage facilities, body shops, junkyards, and other outdoor storage facilities.

Intelligent Transportation Systems (ITS)  | Advanced applications which aim to provide innovative services relating to different modes of transport and traffic management and enable various users to be better informed and make safer, more coordinated, and ‘smarter’ use of transport networks.
Keystone Works  A program of the Pennsylvania Department of Labor and Industry which matches unemployment compensation claimants with businesses willing to provide on-the-job training in open positions. Claimants receiving training remain eligible for unemployment benefits, and businesses are eligible to receive incentive payments when certain milestones are met.

Land Bank  The aggregation of parcels of land for future sale or development to effectively manage and repurpose an inventory of underused, abandoned, or foreclosed property.

Leadership in Energy and Environmental Design (LEED)  A voluntary, consensus-based, market-driven program that provides third-party verification of green buildings.

Local Share Gaming Funds  A federal highway functional classification, these consist of all roads not defined as arterials or collectors and which primarily provides access to land rather than allow through traffic for vehicles. This class includes all residential side streets.

Location Quotient (LQ)  A ratio that compares a region to a larger reference region according to some characteristic or asset, such as the strength of a particular industry.

Main Street Program  An economic redevelopment program used to revitalize and strengthen traditional commercial districts, whether they have officially designated Main Street programs or simply incorporate Main Street into existing economic development, historic preservation, city management, or urban and community planning programs.

Meal Delivery Provider  A service providing meal delivery service to the elderly or home-bound, such as Meals on Wheels.

Medicaid  The federal program for families and individuals with low income and resources, which is jointly funded by the state and federal governments and is managed by the states. People served by Medicaid are citizens or legal permanent residents, including low-income adults, their children, and people with certain disabilities. Poverty alone does not necessarily qualify someone for Medicaid.

 Millennials  The demographic cohort following Generation X, primarily born from 1980 to 2000.

Mining  A land use category that is limited to quarries.

Mixed Use  Areas that include traditional main street or village corridors, featuring retail, residential, and office facilities with little separation among uses.

Mobile Home Park  Residential developments with mobile or manufactured homes.

Montgomery County Association of Township Officials  As founded in 1977, the official organization of the officials of the Townships of the Second Class and comparable elected representatives of Home Rule or Optional Plans member townships of Montgomery County, Pennsylvania. This Association was formed to promote a better knowledge of the rights and duties of township officials.
GLOSSARY OF PLANNING TERMS

Montgomery County Consortium
A consortium of municipal managers and employees dedicated to providing efficient and effective services that are in compliance with municipal, local, state, and federal laws.

Montgomery County Workforce Investment Board (MCWIB)
A board, which meets every other month, which seeks to increase awareness of workforce development issues and to strengthen the county’s workforce development system by developing partnerships with business, government, and community-based organizations.

Moving Ahead for Progress in the 21st Century (MAP-21)
This transportation bill was signed into law on July 6, 2012. Funding surface transportation programs at over $105 billion for fiscal years (FY) 2013 and 2014, MAP-21 is the first long-term highway authorization enacted since 2005.

Multifamily
Residential buildings that contain more than one dwelling unit, with units usually horizontally separated, such as apartments, including garden-style apartment complexes, and duplexes.

Multimodal
In relation to transportation, involving more than one means of transport (such as biking and taking the bus).

Municipal Separate Storm Sewer (MS4) program
This program aims to prevent harmful pollutants from being washed or dumped into an MS4, and requires operators to obtain a NPDES permit and develop a stormwater management program. Phase I, issued in 1990, requires medium and large cities or certain counties with populations of 100,000 or more to obtain NPDES permit coverage for stormwater discharges. Phase II, issued in 1999, requires regulated small MS4s in urbanized areas, as well as small MS4s outside the urbanized areas that are designated by the permitting authority, to obtain NPDES permit coverage for their stormwater discharges.

Municipal Waste Planning, Recycling, and Waste Reduction Act (Act 101)
A 1988 act, Act 101 mandates recycling in the state’s larger municipalities, requires counties to develop municipal waste management plans, and provides for grants to offset expenses.

Municipalities Planning Code (MPC) (Act 247)
The MPC (Act of 1968, PL.805, No.247), as updated, empowers counties and municipalities, individually or jointly, to plan their development and to govern the same by zoning, subdivision and land development ordinances, and additional tools.

National Flood Insurance Program
A federal program created through the National Flood Insurance Act of 1968 which enables property owners in participating communities to purchase insurance protection from the government against losses from flooding. This insurance is designed to provide an insurance alternative to disaster assistance to meet the escalating costs of repairing damage to buildings and their contents caused by floods.
<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>National Highway System (NHS)</td>
<td>A network of strategic nationwide highways, including the Interstate Highway System and other roads serving major airports, ports, rail or truck terminals, railway stations, pipeline terminals and other strategic transport facilities. The roads within the system were identified by the United States Department of Transportation in cooperation with the states, local officials, and metropolitan planning organizations and approved by the United States Congress in 1995.</td>
</tr>
<tr>
<td>National Historic Landmarks</td>
<td>Nationally significant historic places designated by the Secretary of the Interior because they possess exceptional value or quality in illustrating or interpreting the heritage of the United States.</td>
</tr>
<tr>
<td>National Pollutant Discharge Elimination System (NPDES)</td>
<td>As authorized by the Clean Water Act, the NPDES permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States.</td>
</tr>
<tr>
<td>National Register of Historic Places</td>
<td>Established in 1966, the nation's official list of districts, sites, buildings, structures, and objects deemed worthy of preservation. A property listed in the National Register, or located within a National Register Historic District, may qualify for tax incentives derived from the total value of expenses incurred preserving the property.</td>
</tr>
<tr>
<td>Nonfamily</td>
<td>A household comprised of a group of unrelated people or of one person living alone.</td>
</tr>
<tr>
<td>Nursing Homes</td>
<td>A facility licensed to provide health care under medical supervision and continuous nursing care for 24 or more consecutive hours.</td>
</tr>
<tr>
<td>Office</td>
<td>Land occupied by office buildings and associated parking, research and development facilities, hotels, and/or convention centers</td>
</tr>
<tr>
<td>PA CareerLink</td>
<td>A state government website which enables one to search for job openings, create a résumé, apply for jobs online, research career information or request vocational rehabilitation services.</td>
</tr>
<tr>
<td>Pennsylvania Farmland and Forest Land Assessment Act of 1974</td>
<td>Better known as “Clean and Green” or Act 319, this legislation provides a real estate tax benefit to owners with land in agricultural use, agricultural reserve, or forest reserve and are enrolled in the “Clean and Green Program,” enabling the land to be assessed according to use rather than its prevailing market value.</td>
</tr>
<tr>
<td>Pennsylvania Historic District Act of 1961</td>
<td>Authorizes municipalities to create historic districts within their geographic boundaries providing for the appointment of Boards of Historical Architectural Review; empowering governing bodies of political subdivisions to protect the distinctive historical character and to regulate the erection, reconstruction, alteration, restoration, demolition or razing of buildings within the historic districts.</td>
</tr>
<tr>
<td>Pennsylvania Historical and Museum Commission</td>
<td>As of 1945, the official history agency of Pennsylvania, which is responsible for the collection, conservation, and interpretation of the state's historic heritage.</td>
</tr>
<tr>
<td><strong>GLOSSARY OF PLANNING TERMS</strong></td>
<td></td>
</tr>
<tr>
<td>--------------------------------</td>
<td></td>
</tr>
<tr>
<td><strong>Pennsylvania Land Recycling Program</strong></td>
<td>A 1995 state law known as Act 2, this law encourages the voluntary cleanup and reuse of contaminated commercial and industrial sites by allowing an owner or purchaser of a brownfield site to choose any one or combination of cleanup standards to guide remediation. When one or a combination of the background standards are met, the remediator receives liability relief for the property.</td>
</tr>
<tr>
<td><strong>Positive Train Control (PTC)</strong></td>
<td>A system of functional requirements for monitoring and controlling train movements to provide increased safety through (1) train separation or collision avoidance, (2) line speed enforcement, (3) temporary speed restrictions, and (4) rail worker wayside safety.</td>
</tr>
<tr>
<td><strong>Pennsylvania Sewage Facilities Act (Act 537)</strong></td>
<td>A 1966 act which requires municipalities to develop and implement Official Sewage Facilities Plans to ensure adequate sewage service for existing needs and new growth.</td>
</tr>
<tr>
<td><strong>Pottstown Area Rapid Transit (PART)</strong></td>
<td>A multi-line bus service, owned by the Borough of Pottstown, that serves Pottstown and several surrounding municipalities.</td>
</tr>
<tr>
<td><strong>Pennsylvania Stormwater Management Act (Act 167)</strong></td>
<td>Enacted in 1978, this Act requires counties to prepare and adopt watershed based stormwater management plans, as well as municipalities to adopt and implement ordinances to regulate development consistent with these plans.</td>
</tr>
<tr>
<td><strong>Rail Safety Improvement Act of 2008</strong></td>
<td>A federal law enacted to improve railroad safety. Among its provisions, the most notable was the mandate requiring positive train control (PTC) technology to be installed on most of the US railroad network by 2015. This was spurred by the 2008 Chatsworth train collision the month prior to passage of the act.</td>
</tr>
<tr>
<td><strong>Recreation and Parkland Fields</strong></td>
<td>A land use category pertaining only to outdoor recreational uses, both public and private, and parkland fields, even if not currently developed for active recreation, including parkland fields, golf courses, picnic areas, camps, fairgrounds, swimming pools, and zoos.</td>
</tr>
<tr>
<td><strong>Retail</strong></td>
<td>Land predominately used for the sale of goods and services, including commercial strips, malls, big box stores, shopping centers, gas stations, convenience stores, and restaurants.</td>
</tr>
<tr>
<td><strong>Road Diet</strong></td>
<td>A technique in transportation planning whereby the number of travel lanes and/or effective width of the road is reduced in order to achieve systemic improvements.</td>
</tr>
<tr>
<td><strong>Personal Care Homes</strong></td>
<td>A facility that is licensed to provide room and board and to assure that assisted living services are available when needed. Units typically house no more than two residents and have a lockable door on the unit entrance.</td>
</tr>
<tr>
<td><strong>Personal Care Subcontractor</strong></td>
<td>Agencies which provide personnel for non-skilled services to individuals in their homes or other independent living environments. These services may include assistance with self-administered medications; personal care such as assistance with personal hygiene, dressing, and feeding; homemaking such as assistance with household tasks, housekeeping, shopping, meal planning and preparation, and transportation; companionship; and respite care such as assistance and support provided to the family.</td>
</tr>
<tr>
<td>Senior Center</td>
<td>Transportation</td>
</tr>
<tr>
<td>--------------</td>
<td>----------------</td>
</tr>
<tr>
<td>A non-residential facility and community focal point where independent older adults come together for shared services and activities.</td>
<td>Areas dedicated to the movement of people or goods, including public transportation centers, highways, highway interchanges, roads, and airports</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Single-Family Attached</th>
<th>Transportation Alternatives Program</th>
<th>Single-Family Detached</th>
<th>Single-Family Detached Low Density</th>
<th>Transportation Improvement Program (TIP)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential areas with homes that share at least one vertical wall with a neighboring house, including housing types like rowhomes, twins, townhomes, and quadruplexes</td>
<td>Authorized under MAP-21, the TAP provides funding for projects defined as transportation alternatives, including on- and off-road pedestrian and bicycle facilities, infrastructure projects for improving non-driver access to public transportation and enhanced mobility, community improvement activities, and environmental mitigation; recreational trail program projects; safe routes to school projects; and projects for planning, designing, or constructing boulevards and other roadways largely in the right-of-way of former Interstate System routes or other divided highways.</td>
<td>Residential areas with homes which do not share party walls and have yards of varying sizes on all sides.</td>
<td>Residential areas with the same characteristics as Single-Family Detached, but with larger lot sizes (typically an acre or more) and more rural character, generally found in areas without public sewer service.</td>
<td>The regionally agreed upon list of priority transportation projects, as required by federal law (ISTEA, TEA-21, SAFETEA LU). The TIP document must list all projects that intend to use federal funds, along with all non-federally funded projects that are regionally significant.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Transportation Management Associations (TMAs)</th>
<th>Travel Demand Management (TDM)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-profit, member-controlled organizations that provide transportation services in a particular area, such as a commercial district, mall, medical center or industrial park. They are generally public-private partnerships, consisting primarily of area businesses with local government support.</td>
<td>A tool to reduce single occupancy vehicle (SOV) travel as well as facilitate mobility options for area residents. It increases the efficiency of the transportation system through the promotion and facilitation of alternative modes of travel.</td>
</tr>
</tbody>
</table>
**TreeVitalize**
DCNR launched TreeVitalize as a broad-based public-private partnership to increase public awareness of the importance of community trees, and to reverse the loss of tree cover in the state’s metropolitan areas.

**Utilities**
Land use areas that include power generators and substations, water filtration and storage tanks, wastewater treatment plants, landfills, and recycling centers.

**Water**
A land use category that includes rivers, the Green Lane Reservoir, and Deep Creek Lake.

**Wooded**
A land use category that shows areas which are heavily forested, even in developed portions of the county. Interconnected woodlands along streams running through developed and lotted areas have been put into this category.

**Workforce Housing**
A subset of affordable housing, this is housing that is generally aimed at those in the workforce that do not make enough money for appropriate market-rate housing but do not qualify for housing subsidies. This housing may be aimed at particular segments of the workforce, such as teachers or first responders.
